International Nonproprietary Names for Pharmaceutical Substances (INN)

RECOMMENDED International Nonproprietary Names: List 87

Notice is hereby given that, in accordance with paragraph 7 of the Procedure for the Selection of Recommended International Nonproprietary Names for Pharmaceutical Substances [*Off. Rec. Wld Health Org.*, 1955, **60**, 3 (Resolution EB15.R7); 1969, **173**, 10 (Resolution EB43.R9); Resolution EB115.R4 (EB115/2005/REC/1)], the following names are selected as Recommended International Nonproprietary Names. The inclusion of a name in the lists of Recommended International Nonproprietary Names does not imply any recommendation of the use of the substance in medicine or pharmacy.
Lists of Proposed (1–117) and Recommended (1–78) International Nonproprietary Names can be found in *Cumulative List No. 17, 2017* (available in CD-ROM only).

Dénominations communes internationales des Substances pharmaceutiques (DCI)

Dénominations communes internationales RECOMMANDÉES: Liste 87

Il est notifié que, conformément aux dispositions du paragraphe 7 de la Procédure à suivre en vue du choix de Dénominations communes internationales recommandées pour les Substances pharmaceutiques [*Actes off. Org. mond. Santé*, 1955, **60**, 3 (résolution EB15.R7); 1969, **173**, 10 (résolution EB43.R9); résolution EB115.R4 (EB115/2005/REC/1)] les dénominations ci-dessous sont choisies par l'Organisation mondiale de la Santé en tant que dénominations communes internationales recommandées. L'inclusion d'une dénomination dans les listes de DCI recommandées n'implique aucune recommandation en vue de l'utilisation de la substance correspondante en médecine ou en pharmacie.
On trouvera d'autres listes de Dénominations communes internationales proposées (1–117) et recommandées (1–78) dans la *Liste récapitulative No. 17, 2017* (disponible sur CD-ROM seulement).

Denominaciones Comunes Internacionales para las Sustancias Farmacéuticas (DCI)

Denominaciones Comunes Internacionales RECOMENDADAS: Lista 87

De conformidad con lo que dispone el párrafo 7 del Procedimiento de Selección de Denominaciones Comunes Internacionales Recomendadas para las Sustancias Farmacéuticas [*Act. Of. Mund. Salud*, 1955, **60**, 3 (Resolución EB15.R7); 1969, **173**, 10 (Resolución EB43.R9); Résolution EB115.R4 (EB115/2005/REC/1) EB115.R4 (EB115/2005/REC/1)], se comunica por el presente anuncio que las denominaciones que a continuación se expresan han sido seleccionadas como Denominaciones Comunes Internacionales Recomendadas. La inclusión de una denominación en las listas de las Denominaciones Comunes Recomendadas no supone recomendación alguna en favor del empleo de la sustancia respectiva en medicina o en farmacia.
Las listas de Denominaciones Comunes Internacionales Propuestas (1–117) y Recomendadas (1–78) se encuentran reunidas en *Cumulative List No. 17, 2017* (disponible sólo en CD-ROM).

Latin, English, French, Spanish: *Recommended INN*	*Chemical name or description; Molecular formula; Graphic formula*
DCI Recommandée	*Nom chimique ou description; Formule brute; Formule développée*
DCI Recomendada	*Nombre químico o descripción; Fórmula molecular; Fórmula desarrollada*

acmucabtagenum autoleucelum #

acmucabtagene autoleucel

autologous T cells obtained from peripheral blood mononuclear cells by leukapheresis, transduced with a self-inactivating, non-replicating lentiviral vector, encoding a chimeric antigen receptor (CAR) targeting B-lymphocyte antigen CD19 (also known as B-Lymphocyte surface antigen B4) under control of the murine stem cell virus promoter. The transgene is a T cell antigen coupler (TAC) which has three components: (i) an extracellular antigen-binding domain (anti-human CD19; FMC63 single chain variable fragment (scFv)), (ii) an extracellular T cell receptor (TCR) recruitment domain (anti-human CD3ε; UCHT1 scFv [Y177T]), and (iii) a membrane-anchoring co-receptor domain that consists of the transmembrane and cytoplasmic domains of CD4. The vector genome is flanked by 5' and 3' long terminal repeats (LTRs) and contains also a ψ packaging signal, a Rev response element (RRE), a central polypurine tract (cPPT) sequence and the Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE). The leukapheresis material is enriched for CD4/CD8 T cells by positive immunoselection. T cells are cultured in the presence serum-free medium containing IL-2 and IL-7, and activated using a CD3/CD28/CD2 soluble activator. The T cells (>70%, generally ≥99%) are predominantly CD4 and CD8 T cells, with >10% viable CD3+TAC+ cells.

acmucabtagène autoleucel

lymphocytes T autologues obtenus à partir de cellules mononucléaires de sang périphérique par leucaphérèse, transduits avec un vecteur lentiviral auto-inactivant, non répliquant, codant un récepteur antigénique chimérique (CAR) ciblant l'antigène des lymphocytes B CD19 (également connu comme antigène de surface des lymphocytes B B4) sous le contrôle du promoteur du virus des cellules souches murines. Le transgène est un coupleur d'antigène de lymphocyte T (TAC) qui a trois composants: (i) un domaine extracellulaire de liaison à l'antigène (anti-CD19 humain; fragment variable à chaîne unique (scFv) FMC63), (ii) un domaine extracellulaire de recrutement du récepteur des lymphocytes T (TCR) (anti-CD3ε humain; UCHT1 scFv [Y177T]), et (iii) un domaine de corécepteur d'ancrage à la membrane, constitué des domaines transmembranaires et cytoplasmiques du CD4. Le génome du vecteur est flanqué de longues répétitions terminales (LTRs) en 5' et 3' et contient également un signal d'encapsidation ψ, un élément de réponse Rev (RRE), une séquence du tractus polypurine central (cPPT) et l'élément régulateur post-transcriptionnel du virus de l'hépatite de Woodchuck (WPRE). Le matériel de leucaphérèse est enrichi en lymphocytes T CD4/CD8 par immunosélection positive. Les lymphocytes T sont cultivés en présence de milieu sans sérum contenant de l'IL-2 et de l'IL-7, et activés à l'aide d'un activateur soluble CD3/CD28/CD2. Les lymphocytes T (>70%, généralement ≥99%) sont principalement des lymphocytes T CD4 et CD8, avec >10% de cellules CD3+TAC+ viables.

acmucabtagén autoleucel

linfocitos T autólogos obtenidos a partir de células mononucleares de sangre periférica mediante leucaféresis, transducidos con un vector lentiviral auto inactivante, no replicativo, que codifica para un receptor de antígenos quimérico (CAR) dirigido al antígeno de linfocitos CD19 (también conocido como antígeno de superficie de linfocitos B, B4) bajo el control del promotor del virus de células madre murino. El transgen es un acoplador de antígeno de linfocitos T (TAC) que tiene tres componentes: (i) un dominio extracelular de unión a antígeno (anti-CD19 humano; fragmento de cadena variable sencilla (scFV) de FMC63), (ii) un dominio extracelular de reclutamiento del receptor de linfocitos T (TCR) (anti-CD3ε humano; UCHT1 scFC [Y177T]), y (iii) un dominio correceptor de anclaje a la membrana que consiste en los dominios transmembrana y citoplásmico de CD4. El genoma del vector está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y también contiene una señal de empaquetamiento ψ, un elemento de respuesta Rev (RRE), un tracto de poli-purina central (cPPT) y el elemento regulador post-transcripcional del virus de la hepatitis de la marmota (WPRE). El material de leucaféresis se enriquece en linfocitos T CD4/CD8 mediante inmunoselección positiva. Los linfocitos T se cultivan en presencia de medio sin suero que contiene IL-2 y IL-7 y se activan usando el activador soluble CD3/CD28/CD2. Los linfocitos T (>70%, generalmente ≥99%) son predominantemente linfocitos T CD4 y CD8, con >10% de células CD3+TAC+ viables.

azamidugenum autotemcelum #

azamidugene autotemcel autologous CD34+ cells obtained from mobilised peripheral blood, transduced with a self-inactivating lentiviral vector expressing human alpha-L-iduronidase (IDUA) under the control of a human phosphoglycerate kinase (PGK) promoter; the construct is flanked by 5' and 3' long terminal repeats (LTRs) and also contains a HIV-1 ψ packaging signal, a Rev response element (RRE), a central polypurine tract (cPPT) sequence and the Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE). The vector is pseudotyped with the envelope glycoprotein (G) of the vesicular stomatitis virus (VSV). The CD34+ cell population was enriched using immunomagnetic microbeads, and the cells cultured in the presence of media containing FMS-related tyrosine kinase 3 ligand (Flt-3L), interleukin 3 (IL-3), thrombopoietin (TPO) and stem cell factor (SCF). The final substance contains ≥70% CD34+ cells.

azamidugène autotemcel

cellules CD34+ autologues obtenues à partir de sang périphérique mobilisé, transduites avec un vecteur lentiviral auto-inactivant exprimant l' alpha-L-iduronidase humaine (IDUA) sous le contrôle du promoteur de la phosphoglycérate kinase humaine (PGK); la construction est flanquée de longues répétitions terminales (LTRs) en 5' et 3' et contient également un signal d'encapsidation du VIH-1 ψ, un élément de réponse Rev (RRE), une séquence du tractus polypurine central (cPPT) et l'élément régulateur post-transcriptionnel du virus de l'hépatite de Woodchuck (WPRE). Le vecteur est pseudotypé avec la glycoprotéine de l'enveloppe (G) du virus de la stomatite vésiculaire (VSV). La population de cellules CD34+ a été enrichie à l'aide de microbilles immunomagnétiques, et les cellules ont été cultivées en présence de milieu contenant du ligand de la tyrosine kinase 3 liée au FMS (Flt-3L), de l'interleukine 3 (IL-3), de la thrombopoïétine (TPO) et du facteur des cellules souches (SCF). La substance finale contient ≥ 70% de cellules CD34+.

azamidugén autotemcel

células CD34+ autólogas obtenidas a partir de células movilizadas de sangre periférica, transducidas con un vector lentiviral auto-inactivante, que expresa la alfa-L-iduronidasa (IDUA) humana bajo el control de un promotor de la fosfoglicerato quinasa humana (PGK); el constructo está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y también contiene una señal de empaquetamiento ψ de VIH-1, un elemento de respuesta Rev (RRE), un tracto de poli-purina central (cPPT) y el elemento regulador post-transcripcional del virus de la hepatitis de la marmota (WPRE). El vector está seudotipado con la glicoproteína (G) de la envuelta del virus de la estomatitis vesicular (VSV). La población de células CD34+ se enriqueció usando microbolas inmunomagnéticas, y las células se cultivaron en presencia de medio que contiene ligando de tirosina quinasa 3 tipo FMS (Flt-3L), interleukina 3 (IL-3), trombopoyetina (TPO) y factor de células madre (SCF). La substancia final contiene ≥70% de células CD34+.

bomtabegagene bavoparvovec

recombinant, non-replicating adeno-associated virus serotype 9 (AAV9) vector encoding human lysosomal acid beta-galactosidase (GLB1), under control of a cytomegalovirus immediate early enhancer fused to a chicken beta-actin promoter, a chimeric intron containing splice donor site of the chicken beta-actin intron and splice acceptor site of the rabbit beta-globin gene, and terminated with the simian virus 40 (SV40) polyadenylation sequence, flanked by AAV2 inverted terminal repeats (ITRs).

bomtabégagène bavoparvovec	vecteur recombinant, non-répliquant, du virus adéno-associé de sérotype 9 (AAV9) codant la bêta-galactosidase acide lysosomale humaine (GLB1), sous le contrôle d'un activateur précoce immédiat du cytomégalovirus fusionné à un promoteur de la bêta-actine de poulet, un intron chimérique contenant le site donneur d'épissage de l'intron de la bêta-actine de poulet et le site accepteur d'épissage du gène de la bêta-globine de lapin, et terminé par la séquence de polyadénylation du virus simien 40 (SV40), flanqué de répétitions terminales inversées (ITRs) d'AAV2.
bomtabegagén bavoparvovec	vector de virus adenoasociado de serotipo 9 (AAV9) recombinante, no replicativo, que codifica para la beta-galactosidasa ácida lisosomal bajo el control de un potenciador inmediato temprano del citomegalovirus fusionado a un promotor de la beta-actina de pollo, un intrón quimérico que contiene el sitio donante del procesamiento del intrón de la beta-actina de pollo y el sitio aceptor del procesamiento del gen de la beta-globina de conejo, y terminado con la secuencia poliadenilación del virus simio 40 (SV40), flanqueado por repeticiones terminales invertidas (ITRs) de AAV2.

brexucabtagenum autoleucelum #

brexucabtagene autoleucel	autologous T cells obtained from the peripheral blood of patients with relapsed/refractory mantle cell lymphoma, collected by leukapheresis, transduced with a murine stem cell virus-based retroviral vector encoding a chimeric antigen receptor (CAR) under the control of the 5' long terminal repeat (LTR) murine stem cell virus promoter, comprising a single-chain variable fragment derived from the murine antibody FMC63 targeting CD19 (B-lymphocyte antigen CD19), a CD28 spacer, a CD28 transmembrane and intracellular costimulatory domains, and a CD3ζ intracellular activation domain. The T cells are selected with anti-CD4 and anti-CD8 coated particles, activated with anti-CD3, and anti-CD28 antibodies and cultured in media containing IL-2. The CD4/CD8 enriched T cells are predominantly CD3+ (≥98%), anti-CD19.CAR (≥24%), and contain on average 0.1% natural killer (NK) cells and 0.5% other cellular impurities. The T cells also release interferon gamma (IFN-γ) by co-culture *in vitro*.
bréxucabtagène autoleucel	lymphocytes T autologues obtenus à partir du sang périphérique de patients atteints d'un lymphome à cellules du manteau récidivant/réfractaire, recueillis par leucaphérèse, transduits avec un vecteur rétroviral à base de virus de cellules souches murines codant un récepteur antigénique chimérique (CAR) sous le contrôle du promoteur du virus de cellules souches murines à répétition terminale longue (LTR) en 5', comprenant un fragment variable à chaîne unique dérivé de l'anticorps murin FMC63 ciblant CD19 (antigène des lymphocytes B CD19), un espaceur CD28, un CD28 transmembranaire et des domaines co-stimulateurs intracellulaires, et un domaine

	d'activation intracellulaire CD3ζ. Les lymphocytes T sont sélectionnés avec des particules recouvertes d'anti-CD4 et d'anti-CD8, activés avec des anticorps anti-CD3 et anti-CD28, et cultivés dans un milieu contenant de l'IL-2. Les lymphocytes T enrichis en CD4/CD8 sont principalement CD3+ (≥98), anti-CD19.CAR (≥24%), et contiennent en moyenne 0,1% de cellules tueuses naturelles (NK) et 0,5% d'autres impuretés cellulaires. Les lymphocytes T libèrent également de l'interféron gamma (IFN-γ) par co-culture *in vitro*.
brexucabtagén autoleucel	linfocitos T autólogos obtenidos a partir de la sangre periférica de pacientes con linfoma de células del manto mediante leucaféresis, transducidos con un vector retroviral basado en el virus de células madre murino que codifica para un receptor de antígenos quimérico (CAR) bajo el control del promotor de la repetición terminal larga (LTR) en 5' del virus de células madre murino. El CAR consta de un fragmento de cadena variable sencilla derivado del anticuerpo murino FMC63 dirigido a CD19 (antígeno de linfocitos B CD19), un espaciador CD28, un dominio transmembrana y un dominio coestimulador intracelular, ambos de CD28, y un dominio de activación intracelular de CD3ζ. Los linfocitos T se seleccionan con partículas forradas de anticuerpos anti-CD4 y anti-CD8, se activan con anticuerpos anti-CD3 y anti-CD28, y se cultivan en medio que contiene IL-2. Los linfocitos T enriquecidos en CD4/CD8 son predominantemente CD3+ (≥98%), anti-CD19.CAR (≥24%) y contienen de media 0,1% de células natural killer (NK) y 0,5% de otras impurezas celulares. Los linfocitos T liberan también interferón gamma (IFN-γ) mediante co-cultivo *in vitro*.

cinaxadamtasum alfa

cinaxadamtase alfa human ADAMTS13 endopeptidase (a disintregrin and metalloproteinase with thrombospondin motifs 13, von Willebrand

factor-cleaving protease) variant (Q^{23}>R), produced in Chinese hamster ovary (CHO) cells, glycoform alfa;
human ADAMTS13 endopeptidase (a disintegrin and metalloproteinase with thrombospondin motifs 13, von Willebrand factor-cleaving protease, vWF-CP, EC:3.4.24.87), Gln^{23}>Arg variant, produced in Chinese hamster ovary (CHO) cells, glycoform alfa

cinaxadamtase alfa

variant (Q^{23}>R) de l'endopeptidase humaine ADAMTS13 (une désintégrine et métalloprotéinase avec des motifs de thrombospondine, membre 13, protéase clivant le facteur de von Willebrand), produit dans des cellules ovariennes de hamster chinois (CHO), glycoforme alfa;
endopeptidase ADAMTS13 humaine (une disintégrine et métallo-protéinase avec motifs de thrombospondine, membre 13, protéase clivant le facteur de von Willebrand, vWF-CP, EC:3.4.24.87), variant Gln^{23}>Arg, produite par des cellules ovariennes de hamsters chinois (CHO), glycoforme alfa

cinaxadamtasa alfa

endopeptidasa humana ADAMTS13 (miembro 13 de la familia de desintegrinas y metaloproteinasas con motivos de tipo 1 de trombospondinas, proteasa de escisión del factor von Willebrand) variante (Q^{23}>R), producida en células ováricas de hamster chino (CHO), glicoforma alfa;
endopeptidasa ADAMTS13 humana (miembro 13 de la familia de metaloproteinasas y desintegrinas con motivos de tipo 1 de trombospondinas, proteasa de escisión del factor de von Willebrand, vWF-CP, EC:3.4.24.87), variante Gln^{23}>Arg, producida en las células ováricas de hámster chino (CHO), glicoforma alfa

dabocemagenum autoficelum #

dabocemagene autoficel

autologous human dermal fibroblast cells derived from skin biopsies, and transduced with a non-replicating, self-inactivating lentivirus vector that encodes human collagen type VII alpha 1 (COL7A1) under the control of a human cytomegalovirus (CMV) promoter / 5' UTR region with Kozak sequence; the constructis flanked by 5' and 3' long terminal repeats (LTR) and also contains a human immunodeficiency virus (HIV) Rev response element (RRE) and HIV central polypurine tract (cPPT) sequences. The vector is pseudotyped with the envelope glycoprotein (G) of vesicular stomatitis virus (VSV).
Cells isolated from the skin biopsies are expanded in standard growth medium containing serum. The cells are predominately fibroblasts (identified by CD90; ≥98%), with keratinocytes (identified by CD104) being the main residual cell type (≤2%).

dabocémagène autoficel

cellules fibroblastes dermiques humaines autologues dérivées de biopsies de peau, et transduites avec un vecteur lentiviral auto-inactivant non répliquant qui code le collagène humain de type VII alpha 1 (COL7A1) sous le contrôle du promoteur du cytomégalovirus humain (CMV) / région 5' UTR avec séquence de Kozak; la construction est flanquée de longues répétitions terminales (LTR) en 5' et 3' et contient également un élément de réponse Rev (RRE) du virus de l'immunodéficience humaine (VIH) et des séquences du tractus de polypurine central (cPPT) du VIH. Le vecteur est pseudotypé avec la glycoprotéine de l'enveloppe (G) du virus de la stomatite vésiculaire (VSV).
Les cellules isolées à partir des biopsies de peau sont amplifiées dans un milieu de croissance standard contenant du sérum. Les cellules sont principalement des fibroblastes (identifiés par CD90; ≥98%), les kératinocytes (identifiés par CD104) étant le principal type cellulaire résiduel (≤2%).

dabocemagén autoficel

fibroblastos dérmicos humanos autólogos, derivados de biopsias de piel, y transducidos con un vector lentiviral autoinactivante, no replicativo, que codifica para el colágeno humano tipo VII alfa 1 (COL7A1) bajo el control de un promotor de citomegalovirus (CMV) humano / región 5' UTR con secuencia Kozak; el constructo está flanqueado por repeticiones terminales largas (LTR) en 5' y 3' y también contiene las secuencias de un elemento de respuesta Rev (RRE) del virus de inmunodeficiencia humana (VIH) y del tracto de poli-purina central (cPPT) del VIH. El vector está seudotipado con la glicoproteína (G) de la envuelta del virus de la estomatitis vesicular (VSV).
Las células aisladas de biopsias de la piel se expanden en medio de crecimiento estándar que contiene suero. Las células son predominantemente fibroblastos (identificadas por CD90; ≥98%), con queratinocitos (identificados por CD104) como principal tipo celular residual (≤2%).

domofenogenum zalfaparvovecum #

domofenogene zalfaparvovec	recombinant, replication-incompetent adeno-associated virus serotype 5 (AAV5) vector encoding codon-optimized human phenylalanine hydroxylase (hPAH) under control of a liver-selective transcription regulatory element (TRE), consisting of the apolipoprotein E enhancer and the human alpha-1 anti-trypsin promoter, a human alpha-1 anti-trypsin/human beta globin hybrid intron and terminated by the bovine growth hormone polyadenylation sequence, flanked by AAV2 inverted terminal repeats (ITRs).
domofénogène zalfaparvovec	vecteur recombinant, incompétent à la réplication, du virus adéno-associé de sérotype 5 (AAV5), codant la phénylalanine hydroxylase humaine (hPAH) aux codons optimisés, sous le contrôle d'un élément régulateur de transcription (TRE) sélectif du foie, constitué de l'amplificateur de l'apolipoprotéine E et du promoteur de l'antitrypsine alpha-1 humaine, d'un intron hybride antitrypsine alpha-1 humaine/bêta-globine humaine, terminé par la séquence de polyadénylation de l'hormone de croissance bovine, flanqué de répétitions terminales inversées (ITRs) de l' AAV2.

domofenogén zalfaparvovec

vector de virus adenoasociado de serotipo 5 (AAV5) recombinante, incompetente para la replicación, que codifica para la fenilalanina hidroxilasa humana, con codones optimizados, bajo el control de un elemento regulador de la transcripción (TRE) selectivo de hígado consistente en un potenciador de la apolipoproteína E y el promotor de la alfa-1 antitripsina humana, un intron híbrido de la alfa-1 antitripsina humana/beta globina humana y terminado por la secuencia de poliadenilación de la hormona de crecimiento bovina, flanqueado por las repeticiones terminales invertidas (ITRs) del AAV2.

doruxapapogenum ralaplasmidum #

doruxapapogene ralaplasmid

DNA plasmid encoding a fusion protein consisting of E6 and E7 proteins from human papilloma virus (HPV) types 11 and 6, with each protein coding sequence separated by a furin P2A cleavage site in the order HPV11 E6/furin peptide/HPV11 E7/furin peptide/HPV6 E6/furin peptide/HPV6 E7, having an N-terminal immunoglobulin E (IgE) leader sequence, driven by a human cytomegalovirus (CMV) immediate-early promoter and terminated by the bovine growth hormone polyadenylation signal (bGH polyA). The plasmid also contains a pUC origin of replication and a *kanamycin* resistance gene.

doruxapapogène ralaplasmide

plasmide d'ADN codant une protéine de fusion constituée des protéines E6 et E7 des types 11 et 6 du virus du papillome humain (HPV), chaque séquence codant une protéine étant séparée par un site de clivage de la furine P2A dans l'ordre suivant: HPV11 E6/peptide de la furine/HPV11 E7/peptide de la furine/HPV6 E6/peptide de la furine/HPV6 E7, ayant une séquence de tête de l'immunoglobuline E (IgE) en N-terminal, induite par un promoteur immédiat précoce du cytomégalovirus humain (CMV) et terminée par le signal de polyadénylation de l'hormone de croissance bovine (bGH polyA). Le plasmide contient également une origine de réplication pUC et un gène de résistance à la *kanamycine*.

doruxapapogén ralaplásmido

plásmido de ADN que codifica para una proteína de fusión que consta de las proteínas E6 y E7 del virus del papiloma humano (VPH) tipos 11 y 6, con la secuencia que codifica para cada proteína separada por un sitio de escisión de furina P2A en el orden VPH11 E6/péptido de furina/VPH11 E7/ péptido de furina/VPH6 E6/péptido de furina/VPH6 E7, teniendo una secuencia líder N-terminal de inmunoglobulina E (IgE), dirigido por un promotor inmediato-temprano del citomegalovirus (CMV) humano y terminado por una señal de poliadenilación de la hormona de crecimiento bovina. El plásmido también contiene un origen de replicación pUC y un gen de resistencia a *kanamicina*.

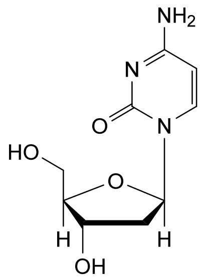
doxecitinum

doxecitine — 2'-deoxycytidine; 4-amino-1-(2-deoxy-β-D-*erythro*-pentofuranosyl)pyrimidin-2(1*H*)-one

doxécitine — 2'-désoxycytidine; 4-amino-1-(2-désoxy-β-D-*érythro*-pentofuranosyl)pyrimidin-2(1*H*)-one

doxecitina — 2'-desoxicitidina; 4-amino-1-(2-desoxi-β-D-*eritro*-pentofuranosil)pirimidin-2(1*H*)-ona

$C_9H_{13}N_3O_4$



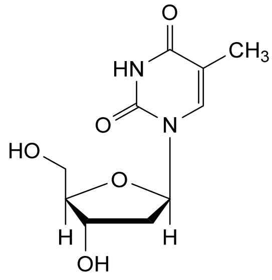
doxribtiminum

doxribtimine — thymidine; 1-(2-deoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione

doxribtimine — thymidine; 1-(2-désoxy-β-D-*érythro*-pentofuranosyl)-5-méthylpyrimidine-2,4(1*H*,3*H*)-dione

doxribtimina — timidina; 1-(2-desoxi-β-D-*eritro*-pentofuranosil)-5-metilpirimidina-2,4(1*H*,3*H*)-diona

$C_{10}H_{14}N_2O_5$



dresbuxelimabum #

dresbuxelimab — immunoglobulin G1-kappa, anti-[*Homo sapiens* NT5E (5'-nucleotidase ecto, 5' nucleotidase, 5'-NT, NT5, CD73)], humanized monoclonal antibody;

efprezimod alfa

human signal transducer CD24 (CD24, small cell lung carcinoma cluster 4 antigen) fragment (1-30), fused to a human immunoglobulin Fc fragment (31-261), dimer, produced in Chinese hamster ovary (CHO) cells, glycoform alfa;
human signal transducer CD24 (CD24, CD24A, heat stable antigen CD24, small cell lung carcinoma cluster 4 antigen) (1-30)-peptide fused with a human immunoglobulin G1 C-terminal Fc (heavy chain constant fragment) (31-261) [*Homo sapiens* IGHG1*01; hinge: 31-44 (E30del); CH2: 45-154; CH3: 155-259; CHS: 260-261]; dimer (40-40':43-43')-bisdisulfide, produced in Chinese hamster ovary (CHO) cells, glycoform alfa

efprézimod alfa

fragment (1-30) du transducteur de signal humain CD24 (CD24, antigène 4 d'amas de carcinome pulmonaire à petites cellules), fusionné à un fragment Fc d'immunoglobuline humaine (31-261), dimère, produit dans des cellules ovariennes de hamster chinois (CHO), glycoforme alfa;
peptide 1-30 du transducteur de signal CD24 humain (CD24, CD24A, antigène thermostable CD24, antigène 4 d'amas de carcinome pulmonaire à petites cellules), fusionné à un Fc de l'extrémité C-terminale de l'immunoglobuline G1 humaine (31-261) [*Homo sapiens* IGHG1*01; charnière: 31-44 (E30del); CH2: 45-154; CH3: 155-259; CHS: 260-261]; dimère (40-40':43-43')-bisdisulfure, produit par des cellules ovariennes de hamsters chinois (CHO), glycoforme alfa

efprezimod alfa

fragment humano del transductor de señal CD24 (CD24, antígeno 4 del grupo de carcinoma de pulmón de células pequeñas) (1-30), fusionado a un fragment Fc de la inmunoglobulina humana (31-261), dímero, producido en células ováricas de hamster chino (CHO), glicoforma alfa;
péptido 1-30 del transductor de señal CD24 humano (CD24, CD24A, antígeno estable al calor CD24, antígeno 4 del grupo de carcinoma de pulmón de células pequeñas), fusionado a un fragmento Fc C-terminal de la inmunoglobulina G1 humana (31-261) [*Homo sapiens* IGHG1*01; bisagra: 31-44 (E30del); CH2: 45-154; CH3: 155-259; CHS: 260-261]; dímero (40-40':43-43')-bisdisulfuro, producido en las células ováricas de hámster chino (CHO), glicoforma alfa

efzofitimodum

efzofitimod

human L-methionyl immunoglobulin G1 Fc fragment (1-228) fused to human histidine tRNA synthetase fragment (2-60, 229-287 in the current sequence), dimer, non-glycosylated, produced in *Escherichia coli;*
L-methionyl human immunoglobulin G1 Fc (1-228) fused to the (2-60)-peptide of human histidine-tRNA ligase, dimer: L-methionyl-immunoglobulin G1 (*Homo sapiens*) γ1-chain C-terminal 227-peptide Fc fragment (1-228) [*Homo sapiens* IGHG1*01; hinge: 1-11; CH2: 12-121; CH3: 122-226; CHS: 227-228] fused with the (2-60)-peptide (neuropilin-2-binding domain, HARS iMod domain, WHEP-TRS domain) (229-287) of human cytoplasmic histidine-tRNA ligase (histidyl-tRNA synthetase, HisRS, HRS, HARS1, HARS, EC:6.1.1.21), dimer (7-7':10-10')-bisdisulfide, non-glycosylated, produced in *Escherichia coli*

efzofitimod

fragment Fc de l'immunoglobuline G1 humaine L-méthionyl (1-228) fusionné au fragment de l'histidine ARNt synthétase humaine (2-60, 229-287 dans la séquence actuelle), dimère, non glycosylé, produit par *Escherichia coli;*
L-méthionyl Fc (1-228) de l’immunoglobuline G1 humain fusionné au peptide 2-60 de l’histidine-ARNt ligase, dimère: L-méthionyl-fragment Fc (227-peptide C-terminal) de la chaîne γ1 de l’immunoglobuline G1

(*Homo sapiens*) (1-228) [*Homo sapiens* IGHG1*01; charnière: 1-11; CH2: 12-121; CH3: 122-226; CHS: 227-228] fusionné au peptide 2-60 (domaine de liaison à la neuropiline-2, domaine HARS iMod, domaine WHEP-TRS) (229-287) de l`histidine-ARNt ligase cytoplasmique humaine (histidyl-ARNt synthétase, HisRS, HRS, HARS1, HARS, EC:6.1.1.21), dimère (7-7':10-10')-bisdisulfure, non glycosylé, produit par *Escherichia coli*

efzofitimod

fragmento Fc de la inmunoglobulina G1 humana L-metionil (1-228) fusionado al fragmento de la histidina ARNt sintetasa humana (2-60, 229-287 en la secuencia actual), dímero, no glicosilado, producido por *Escherichia coli;*
L-metionil Fc (1-228) de inmunoglobulina G1 humana fusionado al péptido 2-60 de la histidina-ARNt ligasa, dímero: L-metionil-fragmento Fc (227-péptido C-terminal) de la cadena γ1 de inmunoglobulina G1 (*Homo sapiens*) (1-228) [*Homo sapiens* IGHG1*01; bisagra: 1-11; CH2: 12-121; CH3: 122-226; CHS: 227-228] fusionado al péptido 2-60 (dominio de unión a neuropilina-2, dominio HARS iMod, dominio WHEP-TRS) (229-287) de la histidina-ARNt ligasa citoplasmática humana (histidil-ARNt sintetasa, HisRS, HRS, HARS1, HARS, EC:6.1.1.21), dímero (7-7':10-10')-bisdisulfuro, no glicosilado, producido por *Escherichia coli*

ersemadromcelum

ersemadromcel	autologous mesenchymal progenitor cells prepared from subcutaneous adipose tissue of patients with osteoarthritis (40-75 years old), collected by liposuction. The adipose tissue is digested and the released cells placed in culture medium containing insulin-transferrin-selenium, recombinant human basic fibroblast growth factor (bFGF), and recombinant human epidermal growth factor (EGF). The cells are frozen, resuscitated and culture expanded to around passage 4-5. The cells express mesenchymal progenitor cell marker CD73, CD90, and CD105 (>95%) and do not express human leukocyte antigen (HLA) DR, CD14, and CD45 (<2%). The cells are capable to differentiate into chondroblasts under standard *in vitro* tissue culture-differentiating conditions and demonstrate the inhibitory effect of mesenchymal progenitor cells on the proliferation of T lymphocytes.
ersémadromcel	cellules progénitrices mésenchymateuses autologues préparées à partir du tissu adipeux sous-cutané de patients atteints d'arthrose (40-75 ans), prélevé par liposuccion. Le tissu adipeux est digéré et les cellules libérées sont placées dans un milieu de culture contenant de l'insuline-transferrine-sélénium, du facteur de croissance basique des fibroblastes (bFGF) humain recombinant et du facteur de croissance épidermique (EGF) humain recombinant. Les cellules sont congelées, réanimées et mises en culture d'amplification jusqu'au passage 4-5 environ. Les cellules expriment les marqueurs de cellules progénitrices mésenchymateuses CD73, CD90 et CD105 (>95%) et n'expriment pas l'antigène leucocytaire humain (HLA) DR, CD14 et CD45 (<2%). Les cellules sont capables de se différencier en chondroblastes dans des conditions standard de différenciation de culture tissulaire *in vitro* et démontrent l'effet inhibiteur des progéniteurs mésenchymateux sur la prolifération des lymphocytes T.
ersemadromcel	células progenitoras mesenquimales autólogas preparadas a partir de tejido adiposo subcutáneo de pacientes con osteoartritis (entre 40-75 años de edad), recogido mediante liposucción. El tejido adiposo se digiere, y las células liberadas se ponen en medio de cultivo que contiene insulina-transferrina-selenio, factor básico de crecimiento de fibroblastos (bFGF) humano recombinante, y factor de crecimiento epidérmico (EGF) humano recombinante. Las células se congelan, se resucitan y se expanden en cultivo hasta aproximadamente 4-5 pases. Las células expresan los marcadores de células progenitoras mesenquimales CD73, CD90 y CD105 (> 95%) y no expresan el antígeno leucocitario humano (HLA) DR, CD14 y CD45 (< 2%). Las células son capaces de diferenciarse en condroblastos bajo condiciones de cultivo estándar para diferenciación *in vitro* y demuestran el efecto inhibidor de las células progenitoras mesenquimales en la proliferación de linfocitos T.

etuvetidigenum autotemcelum #

etuvetidigene autotemcel

autologous CD34+ hematopoietic stem and progenitor cells (HSPC), obtained from bone marrow or mobilised peripheral blood. The cells are transduced *ex vivo* with a self-inactivating (SIN), replication-incompetent human immunodeficiency virus 1 (HIV-1) based lentiviral vector encoding the Wiskott-Aldrich syndrome (WAS) protein under the control of the human WAS gene 1.6 kb promoter. The vector is pseudotyped with the vesicular stomatitis virus (VSV) envelope glycoprotein. The vector genome also contains a mutated Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE), a fragment of the HIV-1 *gag*, the HIV-1 Rev response element (RRE), the HIV-1 central polypurine tract (cPPT) and a fragment of *nef*. The CD34+ cell population corresponds to an heterogenous population of stem and progenitor cells, some expressing the CD90 and/or CD133 markers.

étuvétidigène autotemcel

cellules souches et progénitrices hématopoïétiques CD34+ autologues (HSPC), obtenues à partir de moelle osseuse ou de sang périphérique mobilisé. Les cellules sont transduites *ex vivo* avec un vecteur lentiviral auto-inactivant (SIN), basé sur le virus de l'immunodéficience humaine de type 1 (VIH-1), incompétent à la réplication, codant la protéine du syndrome de Wiskott-Aldrich (WAS) sous le contrôle d'un promoteur de 1,6 kb du gène WAS. Le vecteur est pseudotypé avec la glycoprotéine d'enveloppe du virus de la stomatite vésiculeuse (VSV). Le génome du vecteur contient également un élément régulateur post-transcriptionnel Woodchuck (WPRE) du virus de l'hépatite muté, un fragment du *gag* du VIH-1, l'élément de réponse post-transcriptionnel (RRE) du VIH-1 et le tractus de polypurine central (cPPT) du VIH-1, ainsi qu'un fragment de *nef*. La population de cellules CD34+ correspond à une population hétérogène de cellules souches et progénitrices, certaines exprimant les marqueurs CD90 et/ou CD133.

etuvetidigén autotemcel

células madre y progenitoras hematopoyéticas (HSPC) CD34+, autólogas, obtenidas de médula ósea o movilizadas de sangre periférica. Las células se transducen *ex vivo* con un vector lentiviral basado en virus de inmunodeficiencia humana del tipo 1 (VIH-1), auto inactivante (SIN) y incompetente en replicación, que codifica para la proteína del síndrome de Wiskott-Aldrich (WAS) bajo el control de un promotor de 1,6 kb del gene WAS humano. El vector está seudotipado con la glicoproteína de la envuelta del virus de la estomatitis vesicular (VSV). El genoma del vector también contiene un elemento regulador post-transcipcional del virus de la hepatitis de la marmota (WPRE) mutado, un fragmento de *gag* del VIH-1, un elemento de respuesta post-transcripcional (RRE) del VIH-1 y un tramo central de poli-purinas (cPPT) de VIH-1, así como un fragmento de *nef*. La población de células CD34+ corresponde en una población de celulas madre y progenitoras, algunas expressando los marcadores CD90 y/o CD133.

evoncabtagenum pazurgedleucelum #

evoncabtagene pazurgedleucel — allogeneic T cells obtained from peripheral blood by leukapheresis, genetically modified by CRISPR/Cas9 (clustered regularly interspaced short palindromic repeats/CRISPR-associated protein 9) mediated gene editing consisting of two guide RNAs (gRNAs) introduced transiently as CAS9-gRNA ribonucleoprotein (RNP) complex for the targeted disruption of the T cell receptor alpha chain constant (TRAC) and β2 microglobulin (B2M) loci and insertion of an anti-CD19 chimeric antigen receptor (CAR) transgene into the TRAC locus via an adeno-associated virus serotype 6 (AAV6) vector. The CAR is composed of a humanized single-chain variable fragment (scFv) derived from the murine antibody FMC63 targeting CD19, followed by a CD8 hinge and transmembrane region, a CD28 co-stimulatory domain and a CD3ζ signalling domain. Expression of the CAR is driven by the elongation factor 1 alpha (EF-1α) promoter and is terminated by a synthetic polyadenylation sequence. The CD19 expression cassette is flanked by two TRAC homology arms guiding the expression cassette to the TRAC locus. The T cells are cultured in the presence of growth medium containing interleukin 2 (IL-2) and 7 (IL-7) and are ≥30% CAR+ T cells, ≤0.5% TCR+ and ≤30% B2M+.

évoncabtagène pazurgedleucel

lymphocytes T allogéniques obtenus à partir de sang périphérique par leucaphérèse, génétiquement modifiés par édition génique médiée par CRISPR/Cas9 (courtes répétitions palindromiques groupées et régulièrement espacées / protéine 9 associée à CRISPR), consistant de deux guides ARN (ARNg) introduits transitoirement sous forme de complexe ribonucléoprotéique CAS9-ARNg pour la rupture ciblée des loci de la partie constante de la chaîne alpha du récepteur des lymphocytes T (TRAC) et de la β2 microglobuline (B2M), et l'insertion d'un transgène du récepteur antigénique chimérique (CAR) anti-CD19 dans le locus TRAC via un vecteur du virus adéno-associé de sérotype 6 (AAV6). Le CAR est composé d'un fragment variable à chaîne unique humanisé (scFv) dérivé de l'anticorps murin FMC63 ciblant CD19, suivi d'une charnière CD8 et d'une région transmembranaire, d'un domaine costimulateur CD28 et d'un domaine de signalisation CD3ζ. L'expression du CAR est dirigée par le promoteur du facteur d' élongation 1 alpha (EF-1α) et terminée par une séquence de polyadénylation synthétique. La cassette d'expression CD19 est flanquée de deux bras d'homologie TRAC guidant la cassette d'expression vers le locus TRAC. Les lymphocytes T sont cultivés en présence de milieu de croissance contenant de l'interleukine 2 (IL-2) et 7 (IL-7) et sont ≥30% des lymphocytes CAR+ T, ≤0,5% de TCR+ et ≤30% de B2M+.

evoncabtagén pazurgedleucel

linfocitos T alogénicos obtenidos de sangre periférica mediante leucaféresis, modificados genéticamente por edición génica mediada por CRISPR/Cas9 (repeticiones palindrómicas cortas agrupadas y espaciadas regularmente /proteína asociada a CRISPR 9) que consta de dos ARNs guía (ARNg) introducidos de forma transitoria como un complejo de ribonucleoproteína (RNP) de Cas9-ARNg para la ruptura dirigida de los loci de la cadena constante alfa del receptor del linfocito T (TRAC) y de la β2 microglobulina (B2M) y la inserción del transgen para un receptor de antígeno quimérico (CAR) anti-CD19 en el locus TRAC por medio de un vector de virus adenoasociado de serotipo 6 (AAV6). El CAR está compuesto por un fragmento de cadena variable sencilla (scFV) humanizado, derivado del anticuerpo murino FMC63 dirigido frente a CD19, seguido de una región bisagra y transmembrana de CD8, un dominio coestimulador de CD28 y un dominio de señalización de CD3ζ. La expresión del CAR está dirigida por el promotor del factor de elongación 1 alfa (EF-1α) y terminada por una secuencia de poliadenilación sintética. El casete de expresión de CD19 está flanqueado por dos brazos homólogos de TRAC que guían el casete de expresión al locus TRAC. Los linfocitos T se cultivan en presencia de medio de crecimiento que contiene interleukina 2 (IL-2) y 7 (IL-7) y son ≥30% linfocitos T CAR+, ≤0,5% TCR+ y ≤30% B2M+.

firolimogenum autotemcelum #

firolimogene autotemcel

autologous CD34+ cells isolated from bone marrow of newly diagnosed X-linked severe combined immunodeficiency (X-SCID) patients, transduced *ex vivo* with a self-inactivating lentiviral vector, encoding codon-optimized human interleukin-2 receptor subunit gamma (IL2RG) also known as common gamma chain (γ_c), driven by a short version of the EF1α promoter. The vector contains human immunodeficiency virus (HIV) central polypurine tract sequences, the HIV Rev response element (RRE) and is flanked by HIV long terminal repeats. The vector also contains a 400bp insulator fragment from the chicken β-globin locus inserted into the deleted U3 region of the HIV long terminal repeat followed by a polyadenylation sequence derived from the rabbit β-globin gene.

firolimogène autotemcel

cellules CD34+ autologues isolées de la moelle osseuse de patients atteints d'un déficit immunitaire combiné sévère lié à l'X (X-SCID) récemment diagnostiqué, transduites *ex vivo* avec un vecteur lentiviral auto-inactivant, codant la sous-unité gamma du récepteur de l' interleukine 2 humaine aux codons optimisés (IL2RG) aussi connue comme la chaîne gamma commune (γ_c), exprimée par une version courte du promoteur EF1α. Le vecteur contient des séquences du tractus de polypurine central du virus de l'immunodéficience humaine (VIH), des éléments de réponse Rev (RRE) du VIH et est flanqué par des répétitions terminales longues du VIH. Le vecteur contient aussi un fragment isolant de 400pb provenant du locus de la β-globine de poulet inséré dans la région U3 supprimée des répétitions terminales longues du VIH suivi d'une séquence de polyadénylation dérivée du gène de la β-globine de lapin.

firolimogén autotemcel

células autólogas CD34+ aisladas de médula ósea de pacientes diagnosticados recientemente de inmunodeficiencia combinada severa ligada al cromosma X (X-SCID), transducidas ex vivo con un vector lentiviral auto inactivante, que codifica para la subunidad gamma del receptor de la interleukina 2 humana (IL2RG) también conocida como cadena gamma (γ_c), con codones optimizados, dirigido por una versión corta del promotor EF1α. El vector contiene un segmento central de polipurinas del virus de inmunodeficiencia humana (VIH), el elemento de respuesta Rev (RRE) del VIH y está flanqueado por las repeticiones terminales largas del VIH. El vector también contiene un fragmento aislante de 400 pb del locus de la b-globina de pollo insertado en la región delecionada U3 de la repetición terminal larga del VIH, seguido de una secuencia de poliadenilación derivada del gen de la β-globina de conejo.

ifezuntirgenum inilparvovecum #

ifezuntirgene inilparvovec

a recombinant, replication deficient adeno-associated virus serotype 5 (AAV5) vector encoding a microRNA (miRNA) targeting the exon 1 of human huntingtin protein (HTT) mRNA (miHTT). The expression cassette consists of a chimeric chicken beta-actin promoter, the miHTT sequence engineered in the miR-451 backbone, with the upstream region of miR-451 containing an inactivated miR-144 sequence, and a human growth hormone polyadenylation signal, flanked by AAV2 5' and 3' inverted terminal repeats (ITRs).

ifezuntirgène inilparvovec

vecteur recombinant, à réplication déficiente, du virus adéno-associé de sérotype 5 (AAV5) codant un microARN (miARN) ciblant l'exon 1 de l'ARNm de la protéine huntingtine (HTT) humaine (miHTT). La cassette d'expression consiste d'un promoteur chimérique de la bêta-actine de poulet, de la séquence miHTT intégrée au squelette du miR-451, avec la région en amont de miR-451 contenant une séquence miR-144 inactivée, et d'un signal polyadénylation de l'hormone de croissance humaine, flanquée des répétitions terminales inversées (ITRs) en 5' et 3' de l'AAV2.

ifezuntirgén inilparvovec

vector de virus adenosociado recombinante de serotipo 5 (AAV5) deficiente de replicación que codifica para un microARN (miARN) dirigido al exón 1 del ARNm de la proteína huntingtina humana (miHTT). El casete de expresión consiste en un promotor quimérico de la beta-actina de pollo, la secuencia miHTT introducida por ingeniería en el esqueleto de miR-451, con la región *upstream* de miR-451 que contiene una secuencia miR-144 inactivada, y la señal poliadenilación de la hormona de crecimiento humana, flanqueado en 5' y 3' por la repeticiones terminales invertidas (ITRs) de AAV2.

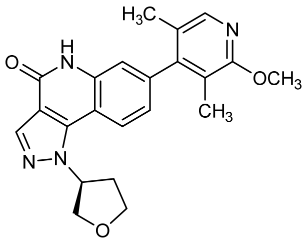
irsenontrinum

irsenontrine — 7-(2-methoxy-3,5-dimethylpyridin-4-yl)-1-[(3*S*)-oxolan-3-yl]-1,5-dihydro-4*H*-pyrazolo[4,3-*c*]quinolin-4-one

irsénontrine — 7-(2-méthoxy-3,5-diméthylpyridin-4-yl)-1-[(3*S*)-oxolan-3-yl]-1,5-dihydro-4*H*-pyrazolo[4,3-*c*]quinoléin-4-one

irsenontrina — 7-(3,5-dimetil-2-metoxipiridin-4-il)-1-[(3*S*)-oxolan-3-il]-1,5-dihidro-4*H*-pirazolo[4,3-*c*]quinolein-4-ona

$C_{22}H_{22}N_4O_3$



itezocabtagenum autoleucelum

itezocabtagene autoleucel — autologous T cells obtained from peripheral blood mononuclear cells by leukapheresis, transduced with a non-replicating Moloney murine leukaemia virus (MMLV) vector, encoding a chimeric antigen receptor (CAR) under the control of the 5' long terminal repeat (LTR) MMLV promoter, comprising a single-chain variable fragment derived from the murine antibody HRS3 targeting CD30 (tumour necrosis factor receptor superfamily member 8 [TNFRSF8]), an IgG1 CH2-CH3 spacer, CD28 transmembrane and intracellular costimulatory domains, and a CD3ζ intracellular activation domain. The T cells are activated in the presence of anti-CD3 and anti-CD28 then cultured in the presence of growth medium containing human serum, interleukin 7 (IL-7) and IL-15. The T cells are CD3+ (≥70%; historically 98% +/- 1.7%), anti-CD30-CAR (≥20%), are cytotoxic for CD30-expressing cells and contain <1% of residual B and natural killer (NK) cells.

itézocabtagène autoleucel	lymphocytes T autologues obtenus à partir de cellules mononucléaires du sang périphérique par leucaphérèse, transduits avec un vecteur non répliquant du virus de la leucémie murine de Moloney (MMLV), codant un récepteur antigénique chimérique (CAR) sous le contrôle du promoteur MMLV à répétition terminale longue (LTR) en 5', comprenant un fragment variable à chaîne unique dérivé de l'anticorps murin HRS3 ciblant CD30 (membre 8 de la superfamille des récepteurs du facteur de nécrose tumorale [TNFRSF8]), un espaceur IgG1 CH2-CH3, un CD28 transmembranaire et des domaines co-stimulateurs intracellulaires, et un domaine d'activation intracellulaire CD3ζ. Les lymphocytes T sont activés en présence d'anti-CD3 et d'anti-CD28 puis cultivés en présence de milieu de croissance contenant du sérum humain, de l'interleukine 7 (IL-7) et de l'IL-15. Les lymphocytes T sont CD3+ (≥70%; historiquement 98% +/- 1,7%), anti-CD30-CAR (≥20%), cytotoxiques pour les cellules exprimant CD30 et contiennent <1% de cellules B et de tueuses naturelles (NK) résiduelles.
itezocabtagén autoleucel	linfocitos T autólogos obtenidos a partir de células mononucleares de sangre periférica mediante leucaféresis, transducidos con un vector no replicativo del virus de la leucemia de Moloney murino (MMLV), que codifica para un receptor de antígenos quimérico (CAR) bajo el control del promotor de la repetición terminal larga (LTR) en 5' del MMLV. El CAR consta de un fragmento de cadena variable sencilla derivado del anticuerpo murino HRS3 dirigido a CD30 (miembro 8 de la superfamilia del receptor del factor de necrosis tumoral [TNFRSF8]), un espaciador CH2-CH3 de IgG1, un dominio transmembrana y un dominio coestimulador intracelular, ambos de CD28, y un dominio de activación intracelular de CD3ζ. Los linfocitos T se activan en presencia de anti-CD3 y anti-CD28, y después se cultivan en presencia de medio de crecimiento que contiene suero humano, interleukina 7 (IL-7) e IL-15. Los linfocitos T son CD3+ (≥70%; históricamente 98% ± 1,7%), anti-CD30-CAR (≥ 20%), son citotóxicos para células que expresan CD30 y contienen <1% de linfocitos B y células natural killer (NK) residuales.

lalikinogenum sifuplasmidum

lalikinogene sifuplasmid

DNA plasmid encoding codon-optimized human interleukin 12 subunit alpha (IL12A, IL-12 subunit p35) and subunit beta (IL12B, IL-12 subunit p40). Expression of the IL-12 subunit p35 is driven by the simian cytomegalovirus (sCMV) promotor and terminated with the bovine growth hormone (bGH) polyadenylation (polyA) signal. Expression of the IL-12 subunit p40 is driven by the human cytomegalovirus (hCMV) promoter and terminated with the simian virus 40 (SV40) polyA signal. The plasmid also contains a pUC origin of replication and a *kanamycin* resistance gene.

lalikinogène sifuplasmide

plasmide d'ADN codant la sous-unité alpha (IL12A, sous-unité p35 de l'IL-12) et la sous-unité bêta (IL12B, sous-unité p40 de l'IL-12) de l'interleukine 12 humaine aux codons optimisés. L'expression de la sous-unité p35 de l'IL-12 est induite par le promoteur du cytomégalovirus simien (sCMV) et terminée par le signal de polyadénylation (polyA) de l'hormone de croissance bovine (bGH). L'expression de la sous-unité p40 de l'IL-12 est induite par le promoteur du cytomégalovirus humain (hCMV) et terminée par le signal de polyA du virus simien 40 (SV40). Le plasmide contient également une origine de réplication pUC et un gène de résistance à la *kanamycine*.

lalikinogén sifuplásmido

plásmido de ADN que codifica para la subunidad alfa (IL12A, IL-12 subunidad p35) y la subunidad beta (IL12B, IL-12 subunidad p40) de la interleukina 12 humana. La expresión de la subunidad p35 de la IL-12 está dirigida por el promotor del citomegalovirus de simio (sCMV) y terminado con la señal de poliadenilación (polyA) de la hormona de crecimiento bovina. La expresión de la subunidad p40 de la IL-12 está dirigida por el promotor del citomegalovirus humano (hCMV) y terminado con la señal de polyA del virus simio 40 (SV40). El plásmido también contiene un origen de replicación pUC y un gen de resistencia a *kanamicina*.

lotazadromcelum

lotazadromcel

allogeneic mesenchymal progenitor cells prepared from subcutaneous adipose tissue of healthy donors (18-40 years old), collected by liposuction. The adipose tissue is digested and the released cells placed in culture medium containing insulin-transferrin-selenium, recombinant human basic fibroblast growth factor (bFGF), and recombinant human epidermal growth factor (EGF). The cells are frozen at an early passage (Master Cell Bank / Working Cell Bank), and then resuscitated and culture expanded to around passage 7. The cells express mesenchymal progenitor cell marker CD73, CD90, and CD105 (>95%) and do not express human leukocyte antigen (HLA) DR, CD14, and CD45 (<2%). The cells are capable to differentiate into chondroblasts under standard *in vitro* tissue culture-differentiating conditions and demonstrate the inhibitory effect of mesenchymal progenitor cells on the proliferation of T lymphocytes.

lotazadromcel

cellules progénitrices mésenchymateuses allogéniques préparées à partir du tissu adipeux sous-cutané de donneurs sains (18-40 ans), prélevé par liposuccion. Le tissu adipeux est digéré, et les cellules libérées sont placées dans un milieu de culture contenant de l'insuline-transferrine-sélénium, du facteur de croissance basique des fibroblastes (bFGF) humain recombinant, et du facteur de croissance épidermique (EGF) humain recombinant. Les cellules sont congelées à un stade précoce (Master Cell Bank / Working Cell Bank), puis ressuscitées et mises en culture d'amplification jusqu'au passage 7 environ. Les cellules expriment les marqueurs de cellules progénitrices mésenchymateuses CD73, CD90 et CD105 (>95%) et n'expriment pas l'antigène leucocytaire humain (HLA) DR, CD14 et CD45 (<2%). Les cellules sont capables de se différencier en chondroblastes dans des conditions standard de différenciation de culture tissulaire *in vitro* et démontrent l'effet inhibiteur des progéniteurs mésenchymateux sur la prolifération des lymphocytes T.

lotazadromcel

células progenitoras mesenquimales autólogas preparadas a partir de tejido adiposo subcutáneo de donantes sanos (entre 18-40 años de edad), recogido mediante liposucción. El tejido adiposo se digiere, y las células liberadas se ponen en medio de cultivo que contiene insulina-transferrina-selenio, factor básico de crecimiento de fibroblastos (bFGF) humano recombinante, y factor de crecimiento epidérmico (EGF) humano recombinante. Las células se congelan en un pase temprano (Banco de Células Maestro/Banco de Células de Trabajo), y después se resucitan y expanden en cultivo hasta aproximadamente 7 pases. Las células expresan los marcadores de células progenitoras mesenquimales CD73, CD90 y CD105 (>95%) y no expresan el antígeno leucocitario humano (HLA) DR, CD14 y CD45 (<2%). Las células son capaces de diferenciarse en condroblastos bajo condiciones de cultivo estándar para diferenciación *in vitro* y demuestran el efecto inhibidor de las células progenitoras mesenquimales en la proliferación de linfocitos T.

lovotibeglogenum autotemcelum #

lovotibeglogene autotemcel

autologous CD34+ hematopoietic stem cells (HSCs) obtained from mobilised peripheral blood, from patients with sickle cell disease. The cells are transduced with *betibeglogene darolentivec*, a self-inactivating human immunodeficiency virus (HIV-1)-derived lentiviral vector encoding a T87Q-mutated form of the human hemoglobin subunit beta (HBB, beta-globin) gene under the control of a human beta-globin promoter and a 3' beta-globin enhancer; the vector genome is flanked by 5' and 3' long terminal repeats (LTRs) and contains a ψ packaging signal, a Rev response element (RRE), and two polypurine tract (PPT) sequences. The CD34+ cell population was enriched using immunomagnetic microbeads, and then cultured in a stem cell growth medium, supplemented with recombinant human cytokines such as stem cell factor (SCF), FMS-related tyrosine kinase 3 ligand (Flt-3L) and thrombopoietin (TPO). The cells consist of CD34+ cells (≥70%), of which ≥56% express the transgene.

lovotibéglogène autotemcel

cellules souches hématopoïétiques (HSCs) CD34+ autologues obtenues à partir de sang périphérique mobilisé, provenant de patients atteints de drépanocytose. Les cellules sont transduites avec *bétibéglogène darolentivec*, un vecteur lentiviral auto-inactivant dérivé du virus de l'immunodéficience humaine (HIV-1) codant pour une forme mutée T87Q du gène de la sous-unité bêta de l'hémoglobine humaine (HBB, bêta-globine) sous le contrôle du promoteur de la bêta-globine humaine et d'un amplificateur de la bêta-globine en 3'; le génome du vecteur est flanqué de longues répétitions terminales (LTRs) en 5' et 3' et contient un signal d'encapsidation ψ, un élément de réponse Rev (RRE) et deux séquences du tractus de polypurine central (cPPT). La population de cellules CD34+ a été enrichie à l'aide de microbilles immunomagnétiques, puis cultivée dans un milieu de croissance de cellules souches, complété par des cytokines humaines recombinantes telles que le facteur de cellules souches (SCF), le ligand de la tyrosine kinase 3 lié au FMS (Flt-3L) et la thrombopoïétine (TPO). Les cellules sont constituées de cellules CD34+ (≥70%), dont ≥56% expriment le transgène.

lovotibeglogén autotemcel

células madre hematopoyéticas CD34+ autólogas obtenidas a partir de células movilizadas de sangre periférica de pacientes con enfermedad de células falciformes. Las células se transducen con *betibeglogén darolentivec*, un vector lentiviral derivado del virus de la inmunodeficiencia humana (VIH-1), auto inactivante, que codifica un gen de una forma mutada T87Q de la subunidad beta de la hemoglobina humana (HBB, beta-globina) bajo el control de un promotor de la beta-globina humana y un potenciador de la beta-globina en 3'; el genoma del vector está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y contiene una señal de empaquetamiento ψ, un elemento de respuesta Rev (RRE), y dos tractos de polipurina central (cPPT). La población de células CD34+ se enriqueció usando microbolas inmunomagnéticas, y después las células se cultivaron en un medio de cultivo de células madre, suplementado con citoquinas humanas recombinantes tales como el factor de células madre (SCF), el ligando de tirosina quinasa 3 tipo FMS (Flt-3L) y trombopoyetina (TPO). Las células constan de células CD34+ (≥70%), de las cuales ≥56% expresan el transgen.

marnetegragenum autotemcelum

marnetegragene autotemcel

autologous CD34+ hematopoietic cells obtained from mobilised peripheral blood, transduced with a self-inactivating, non-replicating lentiviral vector expressing human integrin β2 (ITGB2, CD18) under the control of a cathepsin G (CatG)/c-Fes chimeric promoter; the construct is flanked by 5' and 3' long terminal repeats (LTRs) and also contains a ψ packaging signal, a Rev response element (RRE), a central polypurine tract (cPPT) sequence and the Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE). The vector is pseudotyped with the envelope glycoprotein (G) of vesicular stomatitis virus (VSV). The CD34+ cell population was enriched using immunomagnetic microbeads, and the cells cultured in bags coated with a fragment of recombinant human fibronectin with medium containing stem cell factor (SCF), FMS-related tyrosine kinase 3 ligand (Flt-3L), thrombopoietin (TPO), and interleukin 3 (IL-3). Myeloid differentiated cells generated from the transduced CD34+ cells bind soluble intercellular adhesion molecule-1 (sICAM-1) upon activation.

marnétégragène autotemcel

cellules hématopoïétiques CD34+ autologues obtenues à partir de sang périphérique mobilisé, transduites avec un vecteur lentiviral auto-inactivant et non répliquant exprimant l'intégrine β2 humaine (ITGB2, CD18) sous le contrôle du promoteur chimérique de la cathepsine G (CatG)/c-Fes; la construction est flanquée de longues répétitions terminales (LTRs) en 5' et 3' et contient également un signal d'encapsidation ψ, un élément de réponse Rev (RRE), une séquence du tractus de polypurine central (cPPT) et l'élément régulateur post-transcriptionnel du virus de l'hépatite de Woodchuck (WPRE). Le vecteur est pseudotypé avec la glycoprotéine de l'enveloppe (G) du virus de la stomatite vésiculaire (VSV). La population de cellules CD34+ a été enrichie à l'aide de microbilles immunomagnétiques, et les cellules ont été cultivées dans des sacs recouverts d'un fragment de fibronectine humaine recombinante avec un milieu contenant du facteur de cellules souches (SCF), du ligand de la tyrosine kinase 3 lié au FMS (Flt-3L), de la thrombopoïétine (TPO) et de l'interleukine 3 (IL-3). Les cellules myéloïdes différenciées générées à partir des cellules CD34+ transduites lient la molécule 1 d'adhésion intercellulaire soluble (sICAM-1) lors de l'activation.

marnetegragén autotemcel

células hematopoyéticas CD34+ autólogas obtenidas a partir de células movilizadas de sangre periférica, transducidas con un vector lentiviral auto-inactivante, no replicativo, que expresa la integrina humana β2 (ITGB2, CD18) bajo el control de un promotor quimérico de catepsina G (CatG)/c-Fes; el constructo está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y también contiene una señal de empaquetamiento ψ, un elemento de respuesta Rev (RRE), un tracto de poli-purina central (cPPT) y el elemento regulador post-transcripcional del virus de la hepatitis de la marmota (WPRE). El vector está seudotipado con la glicoproteína (G) de la envuelta del virus de la estomatitis vesicular (VSV). La población de células CD34+ se enriqueció usando microbolas inmunomagnéticas, y las células se cultivaron en bolsas forradas con un fragmento de la fibronectina humana recombinante en medio de cultivo con factor de células madre (SCF), ligando de tirosina quinasa 3 tipo FMS (Flt-3L), trombopoyetina (TPO), y interleukina 3 (IL-3). Las células mieloides diferenciadas que se generan a partir de las células CD34+ transducidas son capaces de unirse a la molécula de adhesión intercelular 1 soluble (sICAM-1) tras su activación.

motacabtagenum lurevgedleucelum #

motacabtagene lurevgedleucel	allogeneic T cells obtained from peripheral blood by leukapheresis, genetically modified by CRISPR/Cas9 (clustered regularly interspaced short palindromic repeats/CRISPR-associated protein 9) mediated gene editing consisting of two guide RNAs (gRNAs) introduced transiently as CAS9-gRNA ribonucleoprotein (RNP) complex for the targeted disruption of the T cell receptor alpha chain constant (TRAC) and β2 microglobulin (B2M) loci and the insertion of an anti-B cell maturation antigen (BCMA) CAR transgene into the TRAC locus via an adeno-associated virus serotype 6 (AAV6) vector. The CAR is composed of a humanized single-chain variable fragment (scFv) targeting BCMA, followed by a CD8 hinge and transmembrane region, a 4-1BB (CD137) co-stimulatory domain and a CD3ζ signalling domain. Expression of the CAR is driven by the elongation factor, EF-1α, promoter and is terminated by a synthetic poly A sequence. The BCMA expression cassette is flanked by two TRAC homology arms guiding the expression cassette to the TRAC locus. The T cells are cultured in the presence of growth medium containing interleukin 2 (IL-2) and 7 (IL-7) and are ≥30% CAR+ T cells, ≤0.4% TCR+ and ≤30% B2M+.
motacabtagène lurévgedleucel	lymphocytes T allogéniques obtenus à partir de sang périphérique par leucaphérèse, génétiquement modifiés par édition génique médiée par CRISPR/Cas9 (courtes répétitions palindromiques groupées et régulièrement espacées / protéine 9 associée à CRISPR), consistant en deux guides ARN (ARNg) introduits transitoirement sous forme de complexe ribonucléoprotéique CAS9-ARNg pour la rupture ciblée des loci de la partie constante de la chaîne alpha du récepteur des lymphocytes T (TRAC) et de la β2 microglobuline (B2M), et l'insertion d'un transgène CAR de l'antigène de maturation des cellules B (BCMA) dans le locus TRAC via un vecteur du virus adéno-associé de sérotype 6 (AAV6). Le CAR est composé d'un fragment variable à chaîne unique (scFv) humanisé ciblant BCMA, suivi d'une charnière CD8 et d'une région transmembranaire, d'un domaine costimulateur 4-1BB (CD137) et d'un domaine de signalisation CD3ζ. L'expression du CAR est dirigée par le promoteur du facteur d'élongation EF-1α et terminée par une séquence poly A synthétique. La cassette d'expression BCMA est flanquée de deux bras d'homologie TRAC guidant la cassette d'expression vers le locus TRAC. Les lymphocytes T sont cultivés en présence de milieu de croissance contenant de l'interleukine 2 (IL-2) et 7 (IL-7) et sont ≥30% des lymphocytes CAR+ T, ≤0,4% TCR+ et ≤30% B2M+.
motacabtagén lurevgedleucel	linfocitos T alogénicos obtenidos de sangre periférica mediante leucaféresis, modificados genéticamente por edición génica mediada por CRISPR/Cas9 (repeticiones palindrómicas cortas agrupadas y

espaciadas regularmente /proteína asociada a CRISPR 9) que consta de dos ARNs guía (ARNg) introducidos de forma transitoria como un complejo de ribonucleoproteína (RNP) de Cas9-ARNg para la ruptura dirigida de los loci de la cadena constante alfa del receptor del linfocito T (TRAC) y de la β2 microglobulina (B2M) y la inserción del transgen para un receptor de antígeno quimérico (CAR) anti-antígeno de maduración de linfocitos B (BCMA) en el locus TRAC por medio de un vector de virus adenoasociado de serotipo 6 (AAV6). El CAR está compuesto por un fragmento de cadena variable sencilla (scFV) humanizado dirigido a BCMA, seguido de una región bisagra y transmembrana de CD8, un dominio coestimulador de 4-1BB (CD137) y un dominio de señalización de CD3ζ. La expresión del CAR está dirigida por el promotor del factor de elongación EF-1α y terminada por una secuencia polyA sintética. El casete de expresión de BCMA está flanqueado por dos brazos homólogos de TRAC que guían el casete de expresión al locus TRAC. Los linfocitos T se cultivan en presencia de medio de crecimiento que contiene interleukina 2 (IL-2) y 7 (IL-7) y son ≥30% linfocitos T CAR+, ≤0,4% TCR+ y ≤30% B2M+.

mozafancogenum autotemcelum #

mozafancogene autotemcel autologous CD34+ cells obtained from mobilised peripheral blood, transduced with a self-inactivating lentiviral vector expressing human Fanconi anemia complementation group A (FANCA) under the control of a human phosphoglycerate kinase (PGK) promoter; the construct is flanked by 5' and 3' long terminal repeats (LTRs) and also contains a ψ packaging signal, a Rev response element (RRE), a central polypurine tract (cPPT) sequence and the Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE). The vector is pseudotyped with the envelope glycoprotein (G) of vesicular stomatitis virus (VSV). The CD34+ cell population was enriched using immunomagnetic microbeads, and the cells cultured in bags coated with a fragment of recombinant human fibronectin in the presence of medium containing stem cell factor (SCF), FMS-related tyrosine kinase 3 ligand (Flt-3L), thrombopoietin (TPO), interleukin 3 (IL-3)) and the TNF-α inhibitor *etanercept*. Myeloid differentiated cells generated from the transduced CD34+ cells are able to form colonies in the presence of *mitomycin* (mitomycin-C, MMC).

mozafancogène autotemcel cellules CD34+ autologues obtenues à partir de sang périphérique mobilisé, transduites avec un vecteur lentiviral auto-inactivant exprimant le groupe A de complémentation de l'anémie de Fanconi (FANCA) humaine sous le contrôle du promoteur de la phosphoglycérate kinase (PGK) humaine; la construction est flanquée de longues répétitions terminales (LTRs) en 5' et 3' et contient également un signal d'encapsidation ψ, un élément de réponse Rev (RRE), une séquence du tractus de polypurine central (cPPT) et l'élément régulateur post-transcriptionnel du virus de l'hépatite de Woodchuck (WPRE). Le vecteur est pseudotypé avec la glycoprotéine de l'enveloppe (G) du virus de la stomatite vésiculaire (VSV). La population de cellules CD34+ a été enrichie à l'aide de microbilles immunomagnétiques, et les cellules ont été cultivées dans des sacs recouverts d'un fragment de fibronectine humaine recombinante en présence de milieu contenant du facteur de cellules souches (SCF), du ligand de la tyrosine kinase 3 lié au FMS (Flt-3L), de la thrombopoïétine (TPO), de l'interleukine 3 (IL-3)) et d'*étanercept*, un inhibiteur du TNF-α. Les cellules myéloïdes différenciées générées à partir des cellules CD34+ transduites sont capables de former des colonies en présence de *mitomycine* (mitomycine-C, MMC).

mozafancogén autotemcel

células CD34+ autólogas obtenidas a partir de células movilizadas de sangre periférica, transducidas con un vector lentiviral auto-inactivante que expresa la anemia de Fanconi, grupo de complementación A (FANCA) humana, bajo el control de un promotor de la fosfoglicerato quinasa (PGH) humana; el constructo está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y también contiene una señal de empaquetamiento ψ, un elemento de respuesta Rev (RRE), un tracto de poli-purina central (cPPT) y el elemento regulador post-transcripcional del virus de la hepatitis de la marmota (WPRE). El vector está seudotipado con la glicoproteína (G) de la envuelta del virus de la estomatitis vesicular (VSV). La población de células CD34+ se enriqueció usando microbolas inmunomagnéticas, y las células se cultivaron en bolsas forradas con un fragmento de la fibronectina humana recombinante en medio de cultivo con factor de células madre (SCF), ligando de tirosina quinasa 3 tipo FMS (Flt-3L), trombopoyetina (TPO), interleuquina 3 (IL-3) y el inhibidor de TNF-α *etanercept*. Las células mieloides diferenciadas que se generan a partir de las células CD34+ transducidas son capaces de formar colonias en presencia de *mitomicina* (mitomicina-C, MMC).

nafimestrocelum

nafimestrocel

allogeneic multilineage differentiating stress-enduring (Muse) cells derived from bone marrow of healthy human donors. The cells are expanded by adherent culture under hypoxic conditions to enrich for stage-specific embryonic antigen-3 (SSEA-3) positive cells. The substance contains Muse cells (≥ 50%) that are double positive for CD105 and the embryonic stem cell marker SSEA-3 and mesenchymal stromal cells (CD105+; <50%). Cells are negative for monocyte marker CD14, B cell marker CD19, hematopoietic stem cell marker CD34, leukocyte marker CD45, and human leukocyte antigen (HLA) DR. Cells have pluripotency, secrete fibroblast growth factor (FGF), hepatocyte growth factor (HGF) and vascular endothelial growth factor (VEGF), and produce antifibrotic/fibrolytic factors (matrix metalloproteinases).

nafimestrocel

cellules allogéniques résistantes au stress à différentiation par multilignage (Muse) dérivées de la moelle osseuse de donneurs humains sains. Les cellules sont amplifiées par culture adhérente dans des conditions hypoxiques pour enrichir les cellules positives pour l'antigène 3 embryonnaire stade spécifique (SSEA-3). La substance contient des cellules Muse (≥ 50 %) qui sont doublement positives pour CD105 et le marqueur de cellules souches embryonnaires SSEA-3 et des cellules stromales mésenchymateuses (CD105+; <50 %). Les cellules sont négatives pour le marqueur de monocyte CD14, le marqueur de cellule B CD19, le marqueur de cellule souche hématopoïétique CD34, le marqueur de leucocyte CD45, et l'antigène leucocytaire humain (HLA) DR. Les cellules sont pluripotentes, sécrètent le facteur de croissance des fibroblastes (FGF), le facteur de croissance des hépatocytes (HGF) et le facteur de croissance de l'endothélium vasculaire (VEGF), et produisent des facteurs antifibrotiques/fibrolytiques (métalloprotéases matricielles).

nafimestrocel

células alogénicas multilinaje resistentes al estrés (Muse) derivadas de médula ósea de donantes sanos. Las células se expanden mediante cultivo adherente en condiciones de hipoxia para enriquecer las células positivas para el antígeno específico de estado embrionario 3 (SSEA-3). La substancia contiene células Muse (≥50%) que son doble positivas para CD105 y el marcador de células madre embrionarias SSEA-3 y células mesenquimales estromales (CD105+; <50%). Las células son negativas para el marcador de monocitos CD14, el marcador de linfocitos B CD19, el marcador de células madre hematopoyéticas CD34, el marcador leucocitario CD45 y para el antígeno leucocitario humano (HLA) DR. Las células tienen pluripotencia, secretan factor de crecimiento de fibroblastos (FGF), factor de crecimiento de hepatocitos (HGF) y factor de crecimiento del endotelio vascular (VEGF), y producen factores antifibróticos/fibrolíticos (metaloproteinasas de matriz).

patidistrogenum bexoparvovecum

patidistrogene bexoparvovec

recombinant self-complementary (dimeric) non-replicating adeno-associated virus serotype rh.74 (AAVrh74) vector encoding codon-optimized human alpha-sarcoglycan (hSGCA), under the control of a triple E box muscle creatine kinase (tMCK) promoter/enhancer, followed by a chimeric intron, composed of the 5' donor site from the human β-globin gene and the branchpoint and 3' splice acceptor site from the IgG heavy chain variable region, and terminated by a small synthetic polyadenylation (polyA) signal sequence, flanked by adeno-associated virus 2 (AAV2) inverted terminal repeats (ITRs).

patidistrogène bexoparvovec

vecteur recombinant auto-complémentaire (dimère) non-répliquant du virus adéno-associé de sérotype rh.74 (AAVrh74) codant l'alpha-sarcoglycane humaine (hSGCA) aux codons optimisés, sous le contrôle d'un promoteur/amplificateur de la créatine kinase musculaire à triple boîte E (tMCK), suivi d'un intron chimérique, composé du site donneur en 5' du gène de la β-globine humaine et du site accepteur d'épissage 3' et du point de branchement de la région variable de la chaîne lourde de l'IgG, et terminé par une petite séquence signal synthétique de polyadénylation (polyA), flanquée de répétitions terminales inversées (ITR) du virus adéno-associé 2 (AAV2).

patidistrogén bexoparvovec

vector de virus adenoasociado recombinante del serotipo rh.74 (AAVrh74), autocomplementario (dimérico), no replicativo, que codifica para el sarcoglicano alfa humano (hSGCA) con codones optimizados, bajo el control de un promotor/potenciador con un triple elemento E-box de la creatina quinasa de músculo (tMCK), seguido de un intron quimérico, compuesto por el sitio donante 5' del gen de la b-globina humana y la bifurcación y el sitio aceptor 3' de la región variable de la cadena pesada de la IgG, y terminado por una pequeña secuencia señal de poliadenilación (polyA) sintética, flanqueado por las repeticiones terminales invertidas (ITRs) del virus adenoasociado 2 (AAV2).

pegipanerminum #

pegipanermin

human tumor necrosis factor (TNF, TNF-alfa, tumor necrosis factor ligand superfamily member 2) soluble fragment (77-233, 1-157 in the current sequence) variant ($V^{77}>M^{1}$, $R^{107}>C^{31}$, $C^{145}>V^{69}$, $Y^{163}>H^{87}$, $C^{177}>A^{101}$, $A^{221}>R^{145}$), pegylated at Cys31 with monomethoxy-polyethylene glycol (mPEG, MW ~10 kDa, n ~225), non-glycosylated, produced in *Escherichia coli;*
human tumor necrosis factor (TNF, TNF-α, TNFA, tumor necrosis factor ligand superfamily member 2, TNFSF2, cachectin) (77-233)-peptide (TNF soluble form, sTNF, 1-157) [$V^{1}>M$, $R^{31}>C$, $C^{69}>V$, $Y^{87}>H$, $C^{101}>A$, $A^{145}>R$]-mutant, non-glycosylated, produced in *Escherichia coli*, conjugated at Cys31 with an *S*-{1-[3-({3-[α-methylpoly(oxyethylene)-ω-oxy]propyl}amino)-3-oxopropyl]-2,5-dioxopyrrolidin-3-yl} group

péguipanermine

variant (77-233, 1-157 dans la séquence actuelle) du fragment soluble du facteur de nécrose tumorale humain (TNF, TNF-alfa, membre 2 de la superfamille des ligands du facteur de nécrose tumorale) ($V^{77}>M^{1}$, $R^{107}>C^{31}$, $C^{145}>V^{69}$, $Y^{163}>H^{87}$, $C^{177}>A^{101}$, $A^{221}>R^{145}$), pégylé sur Cys31 avec du monométhoxy-polyéthylène glycol (mPEG, MW ~10 kDa, n ~ 225), non glycosylé, produit par *Escherichia coli;*

facteur de nécrose tumorale humain (TNF, TNF-α, TNFA, membre 2 de la superfamille des ligands du facteur de nécrose tumorale, TNFSF2, cachectine), peptide 77-233 (forme soluble du TNF, sTNF, 1-157), mutant [V^{1}>M, R^{31}>C, C^{69}>V, Y^{87}>H, C^{101}>A, A^{145}>R], non glycosylé, produit par *Escherichia coli*, conjugué sur Cys31 à un groupe *S*-{1-[3-({3-[α-méthylpoly(oxyéthylène)-ω-oxy]propyl}amino)-3-oxopropyl]-2,5-dioxopyrrolidin-3-yle}

pegipanermina

factor de necrosis tumoral humano (TNF, TNF-alfa, miembro 2 de la superfamilia de los ligandos del factor de necrosis tumoral), fragmento soluble (77-233, 1-157 en la secuencia actual) variante (V^{77}>M^{1}, R^{107}>C^{31}, C^{145}>V^{69}, Y^{163}>H^{87}, C^{177}>A^{101}, A^{221}>R^{145}), pegilado en Cis31 con monometoxi-polietileno glicol (mPEG, MW ~10 kDa, n ~225), no glicosilado, producido por *Escherichia coli;*
factor de necrosis tumoral humano (FNT, TNF, TNF-α, TNFA, miembro 2 de la superfamilia de los ligandos del factor de necrosis tumoral, TNFSF2, caquectina), péptido 77-233 (forma soluble del TNF, sTNF, 1-157), mutante [V^{1}>M, R^{31}>C, C^{69}>V, Y^{87}>H, C^{101}>A, A^{145}>R], no glicosilado, producido por *Escherichia coli*, conjugado en Cis31 con un grupo *S*-{1-[3-({3-[α-metilpoli(oxietileno)-ω-oxi]propil}amino)-3-oxopropil]-2,5-dioxopirrolidin-3-ilo}

sitocabnagenum loxiveleucelum #

sitocabnagene loxiveleucel allogeneic natural killer (NK) cells derived from umbilical cord blood, transduced with a Moloney murine leukaemia virus (MMLV)-based retroviral vector encoding inducible caspase-9 comprising human caspase-9 fused to a human FK506 binding protein variant (FKBP-F36V), a chimeric antigen receptor (CAR) targeting CD19 fused to CD28 and CD3 zeta signalling domains, and secretable human interleukin 15 (IL-15), linked together by T2A and E2A self-cleaving peptide sequences, respectively, under the control of the 5' long terminal repeat (LTR) MMLV promoter; the construct is flanked by 5' and 3' LTRs and contains an MMLV ψ packaging signal and partial *pol* gene. The vector is pseudotyped with the envelope glycoprotein of gibbon ape leukaemia virus (GaLV). The cord blood mononuclear cells are treated with antibody-coated magnetic beads against CD19, CD3 and CD14 to remove B cells, T cells, and monocytes. The purified NK cells are then activated using an irradiated antigen presenting cell line (APC) in the presence of growth medium containing IL-2. Further depletion of residual CD3+ T cell may be performed using antibody-coated magnetic beads. The substance contains >80% NK cells (CD45+CD3-CD56+), of which with >21% are CAR positive, and secrete IL-15.

sitocabnagène loxivéleucel cellules tueuses naturelles (NK) allogéniques dérivées du sang de cordon ombilical, transduites avec un vecteur rétroviral basé sur le virus de la leucémie murine de Moloney (MMLV) codant une caspase-9 inductible comprenant une caspase-9 humaine fusionnée à une variante de la protéine de liaison au FK506 humain (FKBP-F36V), un récepteur antigénique chimérique (CAR) ciblant le CD19 fusionné à des domaines de signalisation CD28 et CD3 zêta, et de l'interleukine 15 (IL-15) humaine sécrétable, liés ensemble par des séquences peptidiques auto-sécables T2A et E2A, respectivement, sous le contrôle du promoteur MMLV à répétition terminale longue (LTR) en 5';

la construction est flanquée de LTRs en 5' et 3', et contient un signal d'encapsulation MMLV ψ et un gène *pol* partiel. Le vecteur est pseudotypé avec la glycoprotéine d'enveloppe du virus de la leucémie du singe gibbon (GaLV). Les cellules mononucléaires du sang de cordon sont traitées avec des billes magnétiques recouvertes d'anticorps contre CD19, CD3 et CD14 pour enlever les cellules B, les lymphocytes T et les monocytes. Les cellules NK purifiées sont ensuite activées en utilisant une lignée de cellules présentatrices d'antigènes (APC) irradiées, en présence de milieu de croissance contenant de l'IL-2. Une déplétion supplémentaire des lymphocytes T CD3+ résiduels peut être effectuée en utilisant des billes magnétiques recouvertes d'anticorps. La substance contient >80% de cellules NK (CD45+CD3-CD56+), dont >21% sont CAR positives, et sécrètent IL-15.

sitocabnagén loxiveleucel

células natural killer (NK) alogénicas derivadas de sangre de cordón umbilical, transducidas con un vector retroviral basado en el virus de la leucemia de Moloney murino (MMLV) que codifica para la caspasa-9 inducible que consta de caspasa-9 humana fusionada a una variante de la proteína de unión a FK506 humana (FKBP-F36V), un receptor de antígenos quimérico (CAR) dirigido a CD19 fusionado a dominios de señalización de CD28 y CD3ζ y para interleukina 15 (IL-15) humana que se puede secretar, ligados entre ellos por secuencias de los péptidos auto-escindibles T2A y E2A, respectivamente, bajo el control del promotor de la repetición terminal larga (LTR) en 5' de MMLV; el constructo está flanqueadov por LTRs en 5' y 3' y contiene una señal de empaquetamiento ψ de MMLV y un gen *pol* parcial. El vector está seudotipado con la glicoproteína de la envuelta del virus de la leucemia del mono gibçon (GaLV). Las células mononucleares de sangre del cordón se tratan con bolas magnéticas forradas de anticuerpos contra CD19, CD3 y CD14 para eliminar linfocitos B, linfocitos T y monocitos. Las células NK purificadas se activan después usando una línea de células presentadoras de antígeno (APC) irradiada en presencia de medio de crecimiento que contiene IL-2. Se puede hacer una depleción adicional de linfocitos T CD3+ residuales usando bolas magnéticas forradas de anticuerpo. La substancia contiene >80% de células NK (CD45+CD3-CD56+), de las cuales >21% son CAR positivas, y secretan IL-15.

Fucosylated complex bi-antennary CHO-type glycans / glycanes de type CHO bi-antennaires complexes fucosylés / glicanos de tipo CHO biantenarios complejos fucosilados.

tapderimotidum

tapderimotide — telomerase reverse transcriptase (human TERT, hTERT, EC:2.7.7.49) (691-705)-peptide;
L-arginyl-L-threonyl-L-phenylalanyl-L-valyl-L-leucyl-L-arginyl-L-valyl-L-arginyl-L-alanyl-L-glutaminyl-L-α-aspartyl-L-prolyl-L-prolyl-L-prolyl-L-glutamic acid

tapdérimotide — (691-705)-peptide de la transcriptase inverse de la télomérase (TERT humaine, hTERT, EC:2.7.7.49);
acide L-arginyl-L-thréonyl-L-phénylalanyl-L-valyl-L-leucyl-L-arginyl-L-valyl-L-arginyl-L-alanyl-L-glutaminyl-L-α-aspartyl-L-prolyl-L-prolyl-L-prolyl-L-glutamique

tapderimotida — (691-705)-péptido de la telomerasa transcriptasa inversa (TERT humana, hTERT, EC:2.7.7.49);
ácido L-arginil-L-treonil-L-fenilalanil-L-valil-L-leucil-L-arginil-L-valil-L-arginil-L-alanil-L-glutaminil-L-α-aspartil-L-prolil-L-prolil-L-prolil-L-glutámico

vusolimogenum oderparepvecum #

vusolimogene oderparepvec — recombinant oncolytic herpes simplex virus 1 (HSV1) based on strain RH018A, with ICP47 (US12) and ICP34.5 (RL1) genes deleted, expressing the US11 gene under the control of the ICP47 promoter, and encoding two copies of an expression cassette inserted in opposite orientation at the ICP34.5 gene deletion sites, comprising codon-optimized human granulocyte-macrophage colony-stimulating factor (hGM-CSF) and a fusogenic codon-optimized gibbon ape leukemia virus (GALV) glycoprotein lacking the R peptide (GALV-R). The hGM-CSF gene is under the control of a cytomegalovirus immediate-early (CMV IE) promoter/bovine growth hormone (BGH) polyadenylation sequence and the truncated GALV-R gene is under the control of a Rous sarcoma virus (RSV) promoter/simian virus 40 (SV40) polyadenylation sequence.

vusolimogène oderparepvec — virus de l'herpès simplex 1 (HSV1) oncolytique recombinant basé sur la souche RH018A, avec délétion des gènes ICP47 (US12) et ICP34.5 (RL1), exprimant le gène US11 sous le contrôle du promoteur ICP47, et codant deux copies d'une cassette d'expression insérée dans une orientation opposée aux sites de délétion du gène ICP34.5, comprenant le facteur humain de stimulation des colonies de granulocytes-macrophages (hGM-CSF) aux codons optimisés et une glycoprotéine fusogène aux codons optimisés du virus de la leucémie de singe Gibbon (GALV) dépourvue du peptide R (GALV-R). Le gène hGM-CSF est sous le contrôle du promoteur précoce immédiat du cytomégalovirus (CMV IE)/séquence de polyadénylation de l'hormone de croissance bovine (BGH) et le gène tronqué GALV-R est sous le contrôle du promoteur du virus du sarcome de Rous (RSV)/séquence de polyadénylation du virus simien 40 (SV40).

vusolimogén oderparepvec — virus herpes simplex 1 (HSV1) recombinante, oncolítico, basado en la cepa RH018A, con los genes ICP47 (US12) e ICP34.5 (RL1) delecionados, que expresa el gen US11 bajo el control del promotor ICP47, y codifica para dos copias de un casete de expresión insertado en orientación opuesta en los sitios de deleción del gen ICP34.5, que contiene el factor estimulador de colonias de granulocitos-macrófagos humano (hGM-CSF) con codones optimizados y una glicoproteína fusogénica del virus de la leucemia de gibones (GALV) sin el péptido R (GALV-R) con codones optimizados. El gen hGM-CSF está bajo el control de un promotor inmediato-temprano del citomegalovirus (CMV IE)/secuencia de poliadenilación de la hormona de crecimiento bocina (BGH) y el gen truncado GALV-R está bajo el control de un promotor del virus del sarcoma de Rous (RSV)/secuencia de poliadenilación del virus simio 40 (SV40).

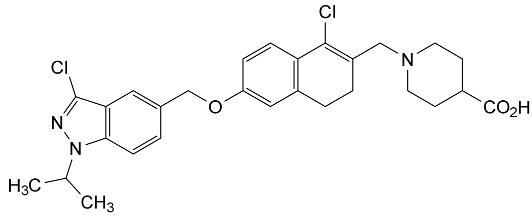
$C_{28}H_{31}Cl_2N_3O_3$



zedenoleucelum
zedenoleucel | allogeneic multi-tumour associated antigen specific T lymphocytes prepared from peripheral blood mononuclear cells (PBMCs), collected by apheresis from human leukocyte antigen (HLA)-matched donors. The donor T cells are purified by depleting CD14+ and CD56+ cells, then co-cultured *ex vivo* with antigen presenting dendritic cells, derived from the same donor that have been exposed to a peptide mixture of four tumour associated antigens: preferentially expressed antigen in melanoma (PRAME), cancer/testis antigen 1 (LAGE2, NY-ESO-1), survivin (BIRC5) and Wilm's tumor protein (WT1). The cells are expanded in medium containing recombinant cytokines interleukin 6 (IL-6), 7 (IL-7), 12 (IL-12), and 15 (IL-15). Cells consist of a mixture of CD4+ and CD8+ T cells, that include effector memory (CD45RA-CD197-; on average 30%), central memory (CD45RA-CD197+; on average 43%), naïve (CD45RA+CD197+; on average 22%) and terminally-differentiated effector memory (CD45RA+CD197-; on average 5%) T cells.

zédénoleucel	lymphocytes T allogéniques spécifiques d'antigènes associés à des tumeurs multiples, préparés à partir de cellules mononucléaires du sang périphérique (PBMC), recueillies par aphérèse auprès de donneurs dont l'antigène leucocytaire humain (HLA) est identique. Les lymphocytes T des donneurs sont purifiés en éliminant les cellules CD14+ et CD56+, puis mis en co-culture *ex vivo* avec des cellules dendritiques présentatrices d'antigène, provenant du même donneur, qui ont été exposées à un mélange peptidique de quatre antigènes associés à des tumeurs: l'antigène exprimé préférentiellement dans le mélanome (PRAME), l'antigène 1 cancer/testicules (LAGE2, NY-ESO-1), la survivine (BIRC5) et la protéine de la tumeur de Wilm (WT1). Les cellules sont amplifiées dans un milieu contenant des cytokines recombinantes interleukine 6 (IL-6), 7 (IL-7), 12 (IL-12) et 15 (IL-15). Les cellules sont constituées d'un mélange de lymphocytes T CD4+ et CD8+, qui comprennent des lymphocytes T de la mémoire effectrice (CD45RA-CD197-; en moyenne 30%), de la mémoire centrale (CD45RA-CD197+; en moyenne 43%), naïfs (CD45RA+CD197+; en moyenne 22%) et de la mémoire effectrice à différenciation terminale (CD45RA+CD197-; en moyenne 5%).
zedenoleucel	linfocitos T alogénicos específicos de antígenos asociados a multi tumores, preparados a partir de células monucleares de sangre periférica, recogidos por aféresis de donantes con antígeno común leucocitario (HLA) compatible. Los linfocitos T de donantes se purifican mediante la depleción de células CD14+ y CD56+, después se co-cultivan *ex vivo* con células dendríticas presentadoras de antígeno, derivadas del mismo donante y que han sido expuestas a una mezcla de cuatro antígenos asociados a tumor: antígeno preferentemente expresado en melanoma (PRAME), antígeno 1 de cáncer/testículos (LAGE2, NY-ESO-1), survivina (BIRC5) y proteína del tumor de Wilm (WT1). Las células se expanden en medio que contiene las citoquinas recombinantes interleukina 6 (IL-6), 7 (IL-7), 12 (IL-12) y 15 (IL-15). Las células consisten en una mezcla de linfocitos T CD4+ y CD8+, que incluyen linfocitos T de memoria efectora (CD45RA-CD197-; 30% de media), de memoria central (CD45RA-CD197+; 43% de media), naif (CD45RA+CD197+; 22% de media) y de memoria efectora completamente diferenciados (CD45RA+CD197-; 5% de media).

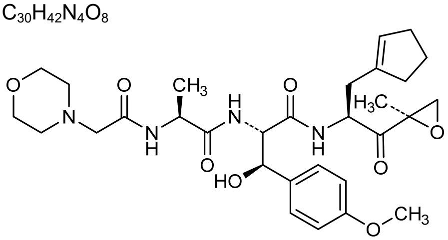
$C_{30}H_{42}N_4O_8$



zevorcabtagenum autoleucelum #

zevorcabtagene autoleucel	autologous T cells obtained from peripheral blood mononuclear cells by leukapheresis, transduced with a self-inactivating, non-replicating lentiviral vector, encoding a chimeric antigen receptor (CAR) targeting B-cell maturation antigen (BCMA, TNFRSF17, CD269). The expressed transgene comprises the anti-BCMA single-chain variable fragment (scFv), a CD8α hinge and transmembrane (TM) domain, a 4-1BB costimulatory domain, a CD3ζ domain and is under control of the elongation factor 1 alpha (EF1α)

promoter. The construct is flanked by 5' and 3' long terminal repeats (LTRs) and also contains a ψ packaging signal, a Rev response element (RRE), a central polypurine tract (cPPT) sequence and the Woodchuck hepatitis virus post-transcriptional regulatory element (WPRE). The T cells are cultured in the presence of growth medium containing IL-2 and activated using anti-CD3 and anti-CD28 antibodies. The cell suspension consists of T cells (>70%), natural killer (NK) cells and low numbers of non-T cells. Greater than 10% of the T cells express the CAR-BCMA transgene. The T cells secrete interferon gamma (IFN-γ) following co-culture with BCMA-expressing cells.

zévorcabtagène autoleucel

lymphocytes T autologues obtenus à partir de cellules mononucléaires de sang périphérique par leucaphérèse, transduits avec un vecteur lentiviral auto-inactivant et non répliquant, codant un récepteur antigénique chimérique (CAR) ciblant l'antigène de maturation des cellules B (BCMA, TNFRSF17, CD269). Le transgène exprimé comprend le fragment variable à chaîne unique (scFv) anti-BCMA, un domaine transmembranaire (TM) et charnière CD8α, un domaine costimulateur 4-1BB, un domaine CD3ζ et est sous le contrôle du promoteur du facteur d'élongation 1 alpha (EF1α). La construction est flanquée de répétitions terminales longues (LTRs) en 5' et 3' et contient également un signal d'encapsidation ψ, un élément de réponse Rev (RRE), une séquence du tractus de polypurine central (cPPT) et l'élément régulateur post-transcriptionnel du virus de l'hépatite de Woodchuck (WPRE).
Les lymphocytes T sont cultivés en présence de milieu de croissance contenant de l'IL-2 et activés à l'aide d'anticorps anti-CD3 et anti-CD28. La suspension cellulaire se compose de lymphocytes T (>70%), de cellules tueuses naturelles (NK) et d'un faible nombre de cellules non T. Plus de 10% des lymphocytes T expriment le transgène CAR-BCMA. Les lymphocytes T sécrètent de l'interféron gamma (IFN-γ) après co-culture avec des cellules exprimant le BCMA.

zevorcabtagén autoleucel

linfocitos T autólogos obtenidos a partir de células mononucleares de sangre periférica mediante leucaféresis, transducidos con un vector lentiviral auto inactivante, no replicativo, que codifica para un receptor de antígenos quimérico (CAR) dirigido al antígeno de maduración de linfocitos B (BCMA, TNFRSF17, CD269). El transgen expresado contiene el fragmento de cadena variable sencilla (scFV) anti-BCMA, un dominio bisagra y transmembrana de CD8α, un dominio coestimulador de 4-1BB, un dominio de CD3ζ y está bajo el control del promotor del factor de elongación 1 alfa (EF1α). El constructo está flanqueado por repeticiones terminales largas (LTRs) en 5' y 3' y también contiene una señal de empaquetamiento ψ, un elemento de respuesta Rev (RRE), un tracto de poli-purina central (cPPT) y un elemento regulador post-transcripcional del virus de la hepatitis de la marmota (WPRE). Los linfocitos T se cultivan en presencia de medio de crecimiento que contiene IL-2 y se activan usando anticuerpos anti-CD3 y anti-CD28. La suspensión celular consiste en linfocitos T (>70%), células natural killer (NK) y bajas cantidades de células no-T. Más del 10% de los linfocitos T expresan el transgen CAR-BCMA. Los linfocitos T secretan interferón gamma (IFN-γ) tras co-cultivo con células que expresan BCMA.

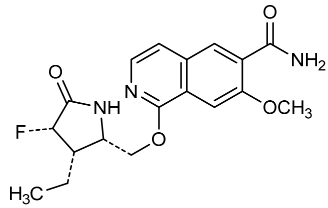
zimlovisertib — 1-{[(2*S*,3*S*,4*S*)-3-ethyl-4-fluoro-5-oxopyrrolidin-2-yl]methoxy}-7-methoxyisoquinoline-6-carboxamide

zimlovisertib — 1-{[(2*S*,3*S*,4*S*)-3-éthyl-4-fluoro-5-oxopyrrolidin-2-yl]méthoxy}-7-méthoxyisoquinoléine-6-carboxamide zimlovisertib 1-{[(2*S*,3*S*,4*S*)-3-etil-4-fluoro-5-oxopirrolidin-2-il]metoxi}-7-metoxiisoquinoleína-6-carboxamida

$C_{18}H_{20}FN_3O_4$



zinpentraxinum alfa #

zinpentraxin alfa human serum amyloid P component (SAP, pentraxin-2), non-covalent cyclic homopentamer, produced in Chinese hamster ovary (CHO) cells, glycoform alfa;
serum amyloid P component (APCS, SAP, pentraxin 2, pentaxin 2, PTX2, 9.5S α-1 glycoprotein), non-covalent cyclic homopentamer, human, produced in Chinese hamster ovary (CHO) cells, glycoform alfa

zinpentraxine alfa composant P de l'amyloïde sérique humaine (SAP, pentraxine-2), homopentamère cyclique non covalent, produit dans des cellules ovariennes de hamster chinois (CHO), glycoforme alfa;
composant P de l'amyloïde sérique (APCS, SAP, pentraxine 2, pentaxine 2, PTX2, glycoprotéine 9.5S α-1), homopentamère cyclique non covalent, humain, produit dans des cellules ovariennes de hamster chinois (CHO), glycoforme alfa

zinpentraxina alfa componente amiloide sérico P (SAP, pentraxina 2) homopentámero cíclico no covalente, producido en células ováricas de hámster chino (CHO), glicoforma alfa;
componente amiloide sérico P (APCS, SAP, pentraxina 2, pentaxina 2, PTX2, glicoproteína 9.5S α-1), homopentámero cíclico no covalente, humano, producido en células ováricas de hámster chino (CHO), glicoforma alfa

International Nonproprietary Names for Pharmaceutical Substances (INN)
RECOMMENDED International Nonproprietary Names: List 87 Addendum

Dénominations communes internationales des Substances pharmaceutiques (DCI)

Dénominations communes internationales RECOMMANDÉES: Liste 87 Addendum

Denominaciones Comunes Internacionales para las Sustancias Farmacéuticas (DCI)

Denominaciones Comunes Internacionales RECOMENDADAS: Lista 87 Addendum

riltozinameranum #

riltozinameran — messenger RNA (mRNA), 5'-capped, encoding a full-length, codon-optimised pre-fusion stabilised conformation variant (K983P and V984P) of the SARS-CoV-2 (severe acute respiratory syndrome coronavirus 2; Omicron variant; B.1.1.529; hCoV-19/Botswana/R42B5_BHP_AAC25114/2021; GISAID: EPI_ISL_6752026) spike (S) glycoprotein, flanked by 5' and 3' untranslated regions and a 3' poly(A) tail; contains N^1-methylpseudouridine instead of uridine (*all*-U>$m^1\Psi$).

riltozinaméran — ARN messager (ARNm), protégé en 5', codant la séquence entière d'un variant à la conformation stabilisée par pré-fusion (K983P et V984P) de la glycoprotéine de la spicule (S) du SARS-CoV-2 (coronavirus 2 du syndrome respiratoire aigu sévère; Omicron variant; B.1.1.529; hCoV-19/Botswana/R42B5_BHP_AAC25114/2021; GISAID: EPI_ISL_6752026) et aux codons optimisés, flanquée de régions non traduites en 5' et 3' et d'une queue poly(A) en 3'; contient de la N^1-méthylpseudouridine au lieu de l'uridine (*tout*-U>$m^1\Psi$).

riltozinamerán — ARN mensajero (ARNm), protegido en 5', que codifica para una variante pre-fusión de conformación estabilizada (K983P y V984P) de la glicoproteína de la espícula (S) del SARS-CoV-2 (coronavirus 2 del síndrome respiratorio agudo severo; Omicron variant; B.1.1.529; hCoV-19/Botswana/R42B5_BHP_AAC25114/2021; GISAID: EPI_ISL_6752026) completa, con codones optimizados, flanqueada por regiones 5' y 3' no traducidas y una cola poly(A) en 3'; contiene N^1-metilpseudouridina en lugar de uridina (*todo*-U>$m^1\Psi$).

Please note that due to exceptional pandemic circumstances, this Proposed INN had been opened for public consultation for a period of two weeks only (instead of four months) and the publication date to be retained was the date of web publication on the WHO INN website. Since no objections were raised prior to the deadline (11 February 2022) it has now reached the status of Recommended INN and will be include in Recommended INN List 87. The procedure "INN for Variant COVID-19 Vaccine Active Substances" can be found at https://www.who.int/publications/i/item/inn-21-520.

Veuillez noter qu'en raison de circonstances pandémiques exceptionnelles, cette DCI Proposée a été ouverte à la consultation publique pour une période de deux semaines seulement (au lieu de quatre mois) et la date de publication à retenir était la date de publication sur le site Internet du Programme des DCI de l'OMS. Puisqu'aucune objection n'a été reçue avant la date limite (11 février 2022), elle a atteint le statut de DCI Recommandée et est incluse dans la Liste 87 des DCI Recommandées. La *procédure "INN for Variant COVID-19 Vaccine Active Substances" peut être trouvée à https://www.who.int/publications/i/item/inn-21-520.*

Tenga en cuenta que debido a circunstancias excepcionales de la pandemia, esta DCI Propuesta estaba abierta a la consulta pública durante un período de sólo dos semanas (en lugar de cuatro meses) y la fecha de publicación que debe conservarse es la fecha de publicación en el sitio web del Programa de las DCI de la OMS. Dado que no se recibieron objeciones antes de la fecha límite (11 de febrero de 2022), ha alcanzado el estado de DCI Recomendada y está incluida en la lista 87 de DCI Recomendadas. Se puede encontrar la procedura "INN for Variant COVID-19 Vaccine Active Substances" en nuestro sitio web https://www.who.int/publications/i/item/inn-21-520.
